useful electronics for a better world

Learn To Solder

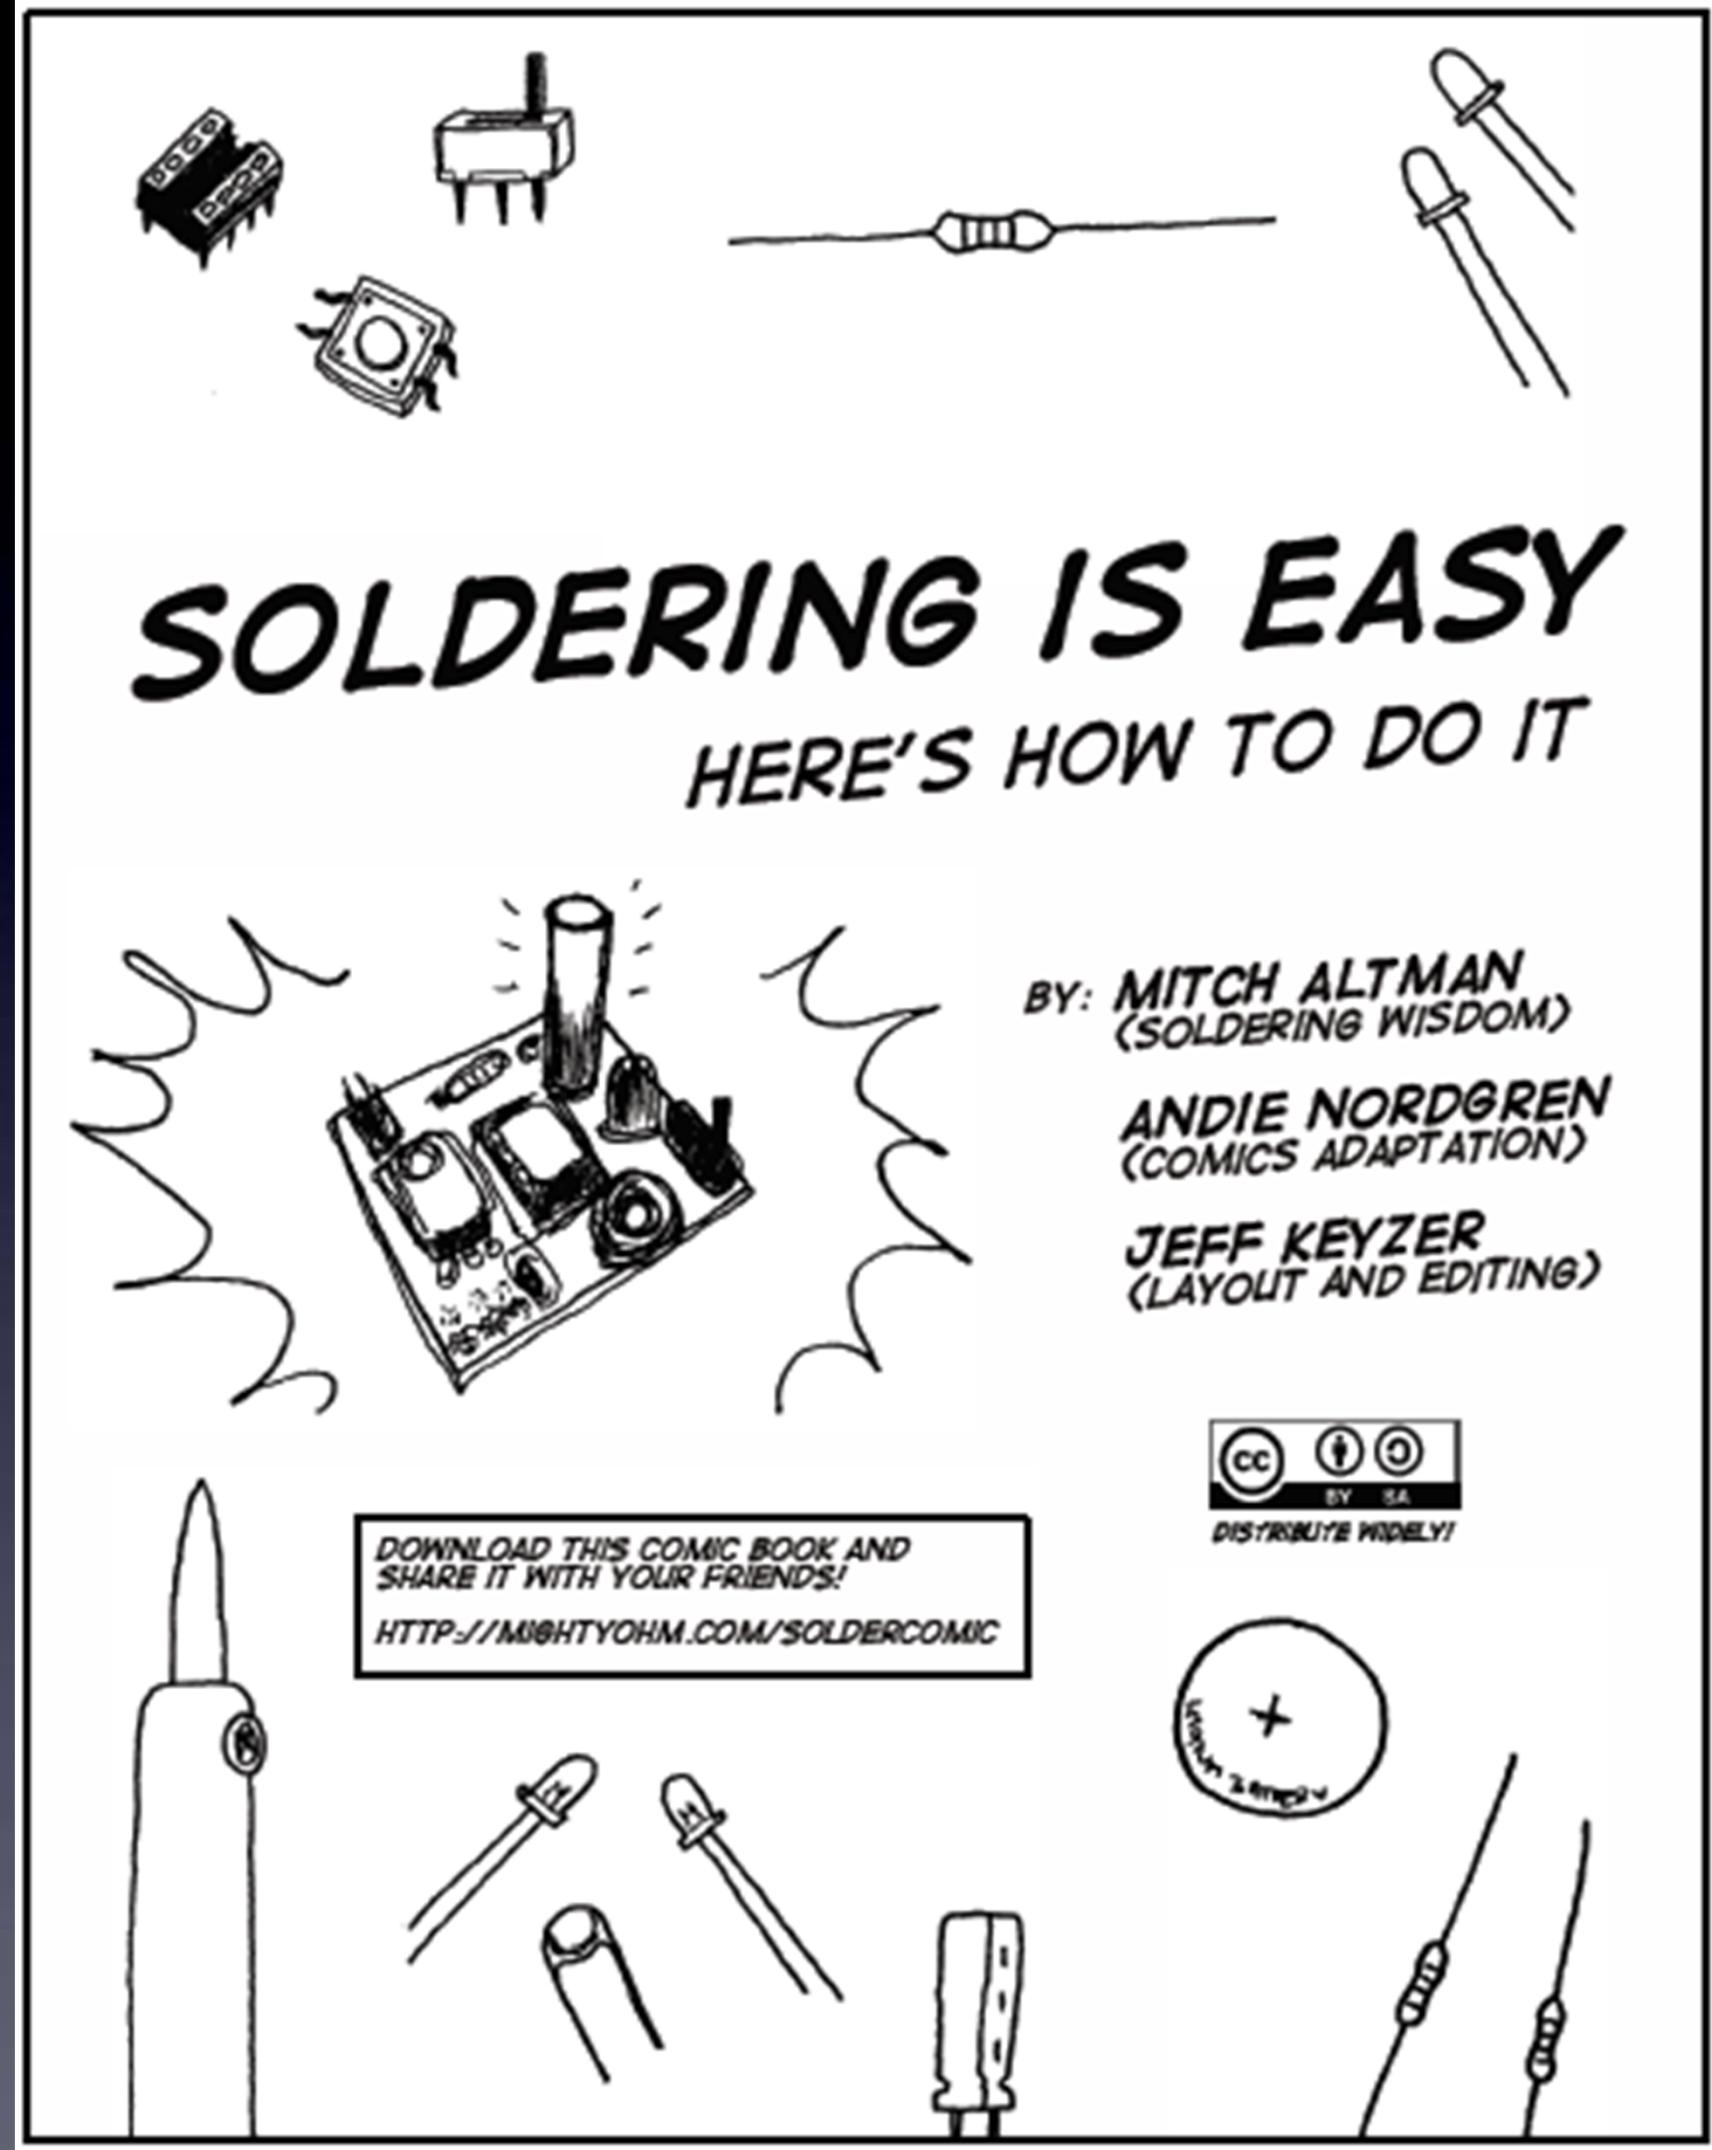

The following photos will show you how to solder.
But feel free to download the “Soldering Is Easy” comic book for free!

(In many different languages.)

Note:

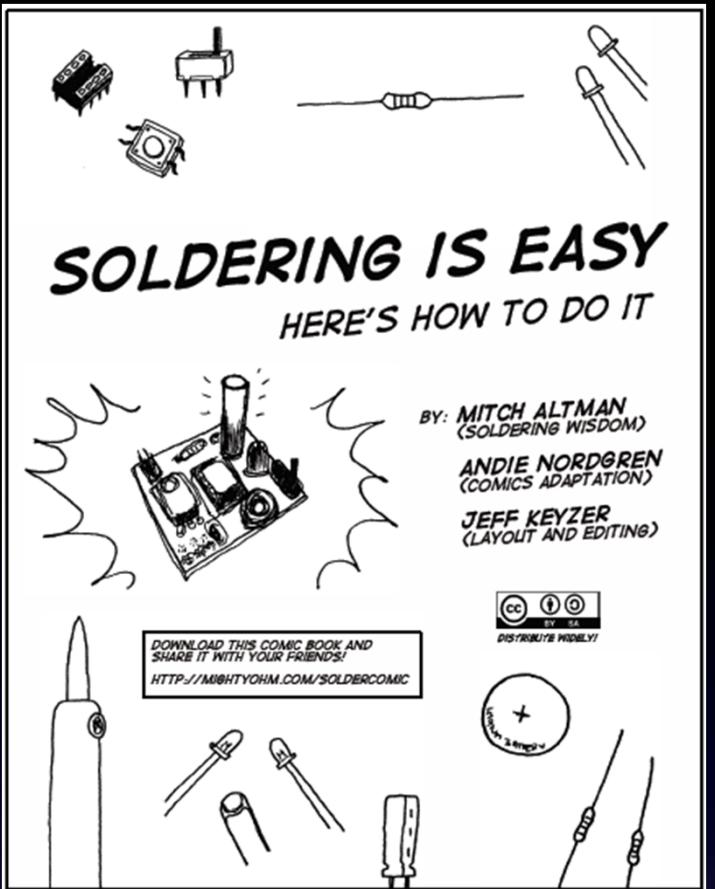

If you use Lead-Free solder it is helpful to also have flux paste in a syringe And Isopropyl Alcohol

The image shows a green and white tube of AMTECH Tacky Paste Lead-Free flux paste, labeled with 'TYPE: NC-559-ASM' and 'Volume: 10 mL'. Next to it is a white plastic bottle of 99% Isopropyl Alcohol, labeled 'swan.' and '99% Isopropyl Alcohol'.

The tools you'll need:

- soldering Iron (35W or less)
- solder (*more details coming*)
- soldering iron stand
- cellulose kitchen sponge (*not plastic!*)
- *small* wire cutter

Learn To Solder

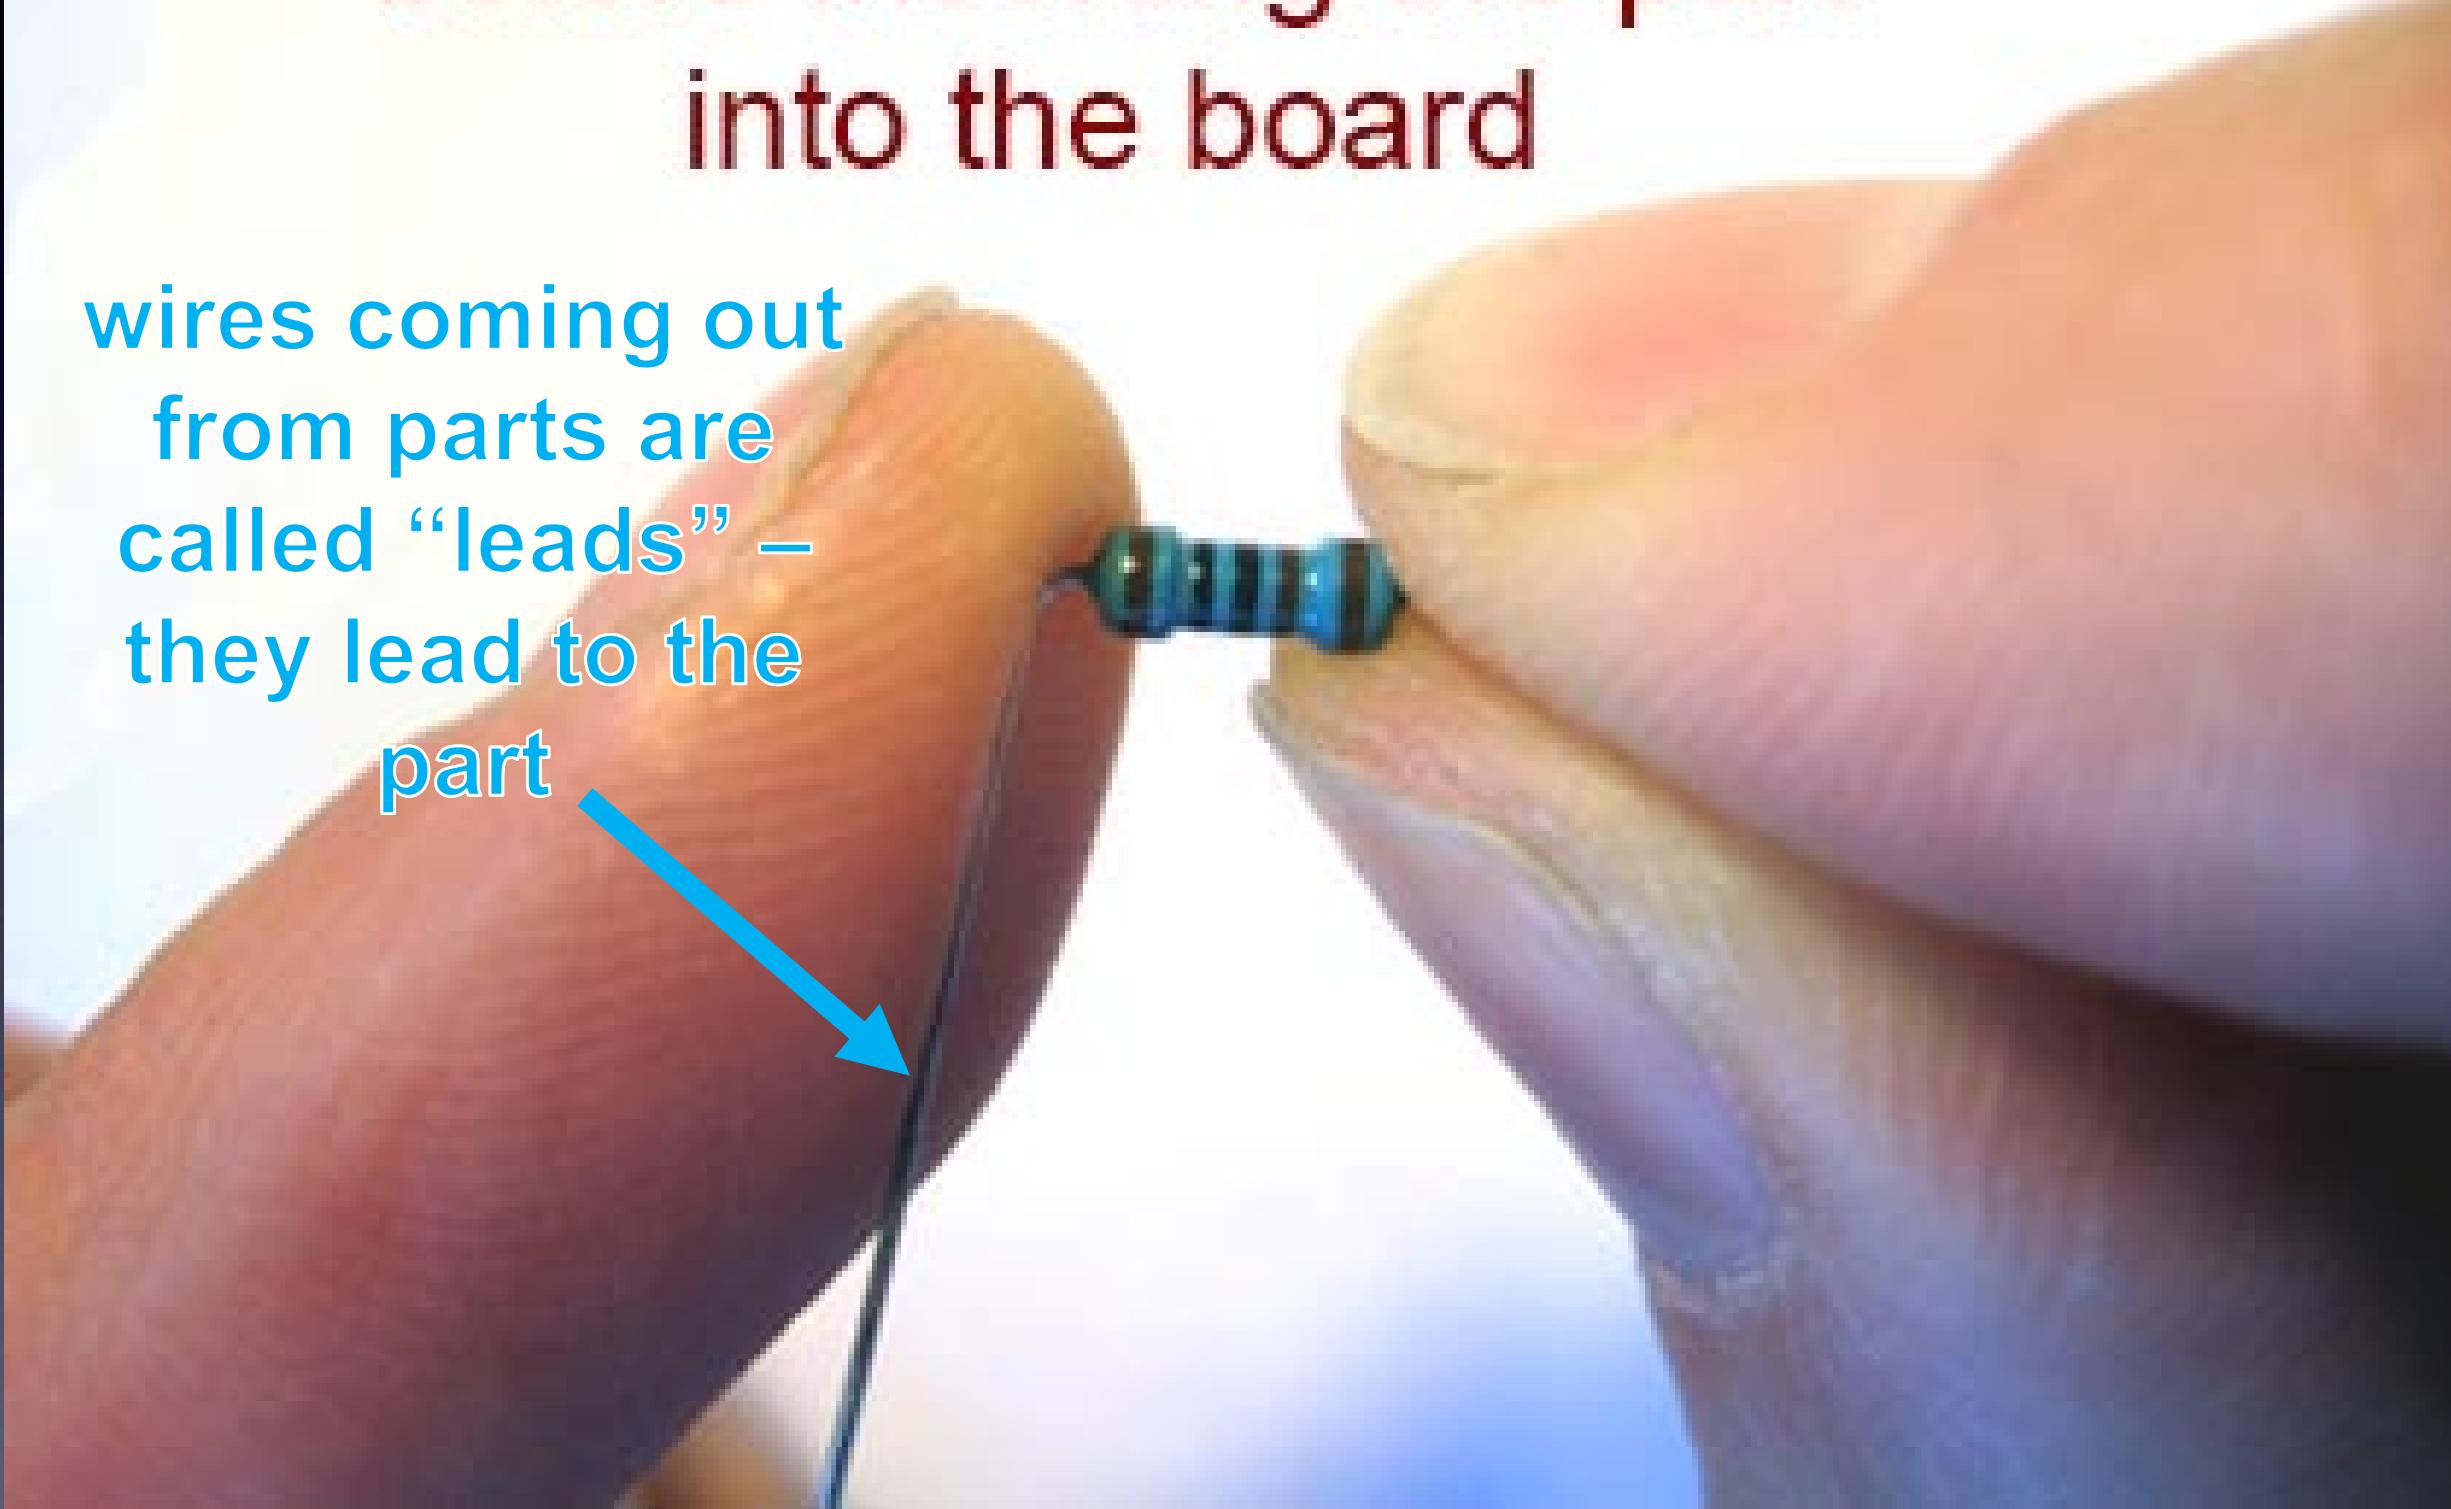

The following photos will show you how to solder a resistor.

There are no resistors in some kits.
But the soldering procedure is the same for all parts.

Some parts, such as resistors, need their leads bent first

If necessary, Bend leads
before inserting the part
into the board

wires coming out
from parts are
called “leads” –
they lead to the
part

Most kits have resistors, like this part:

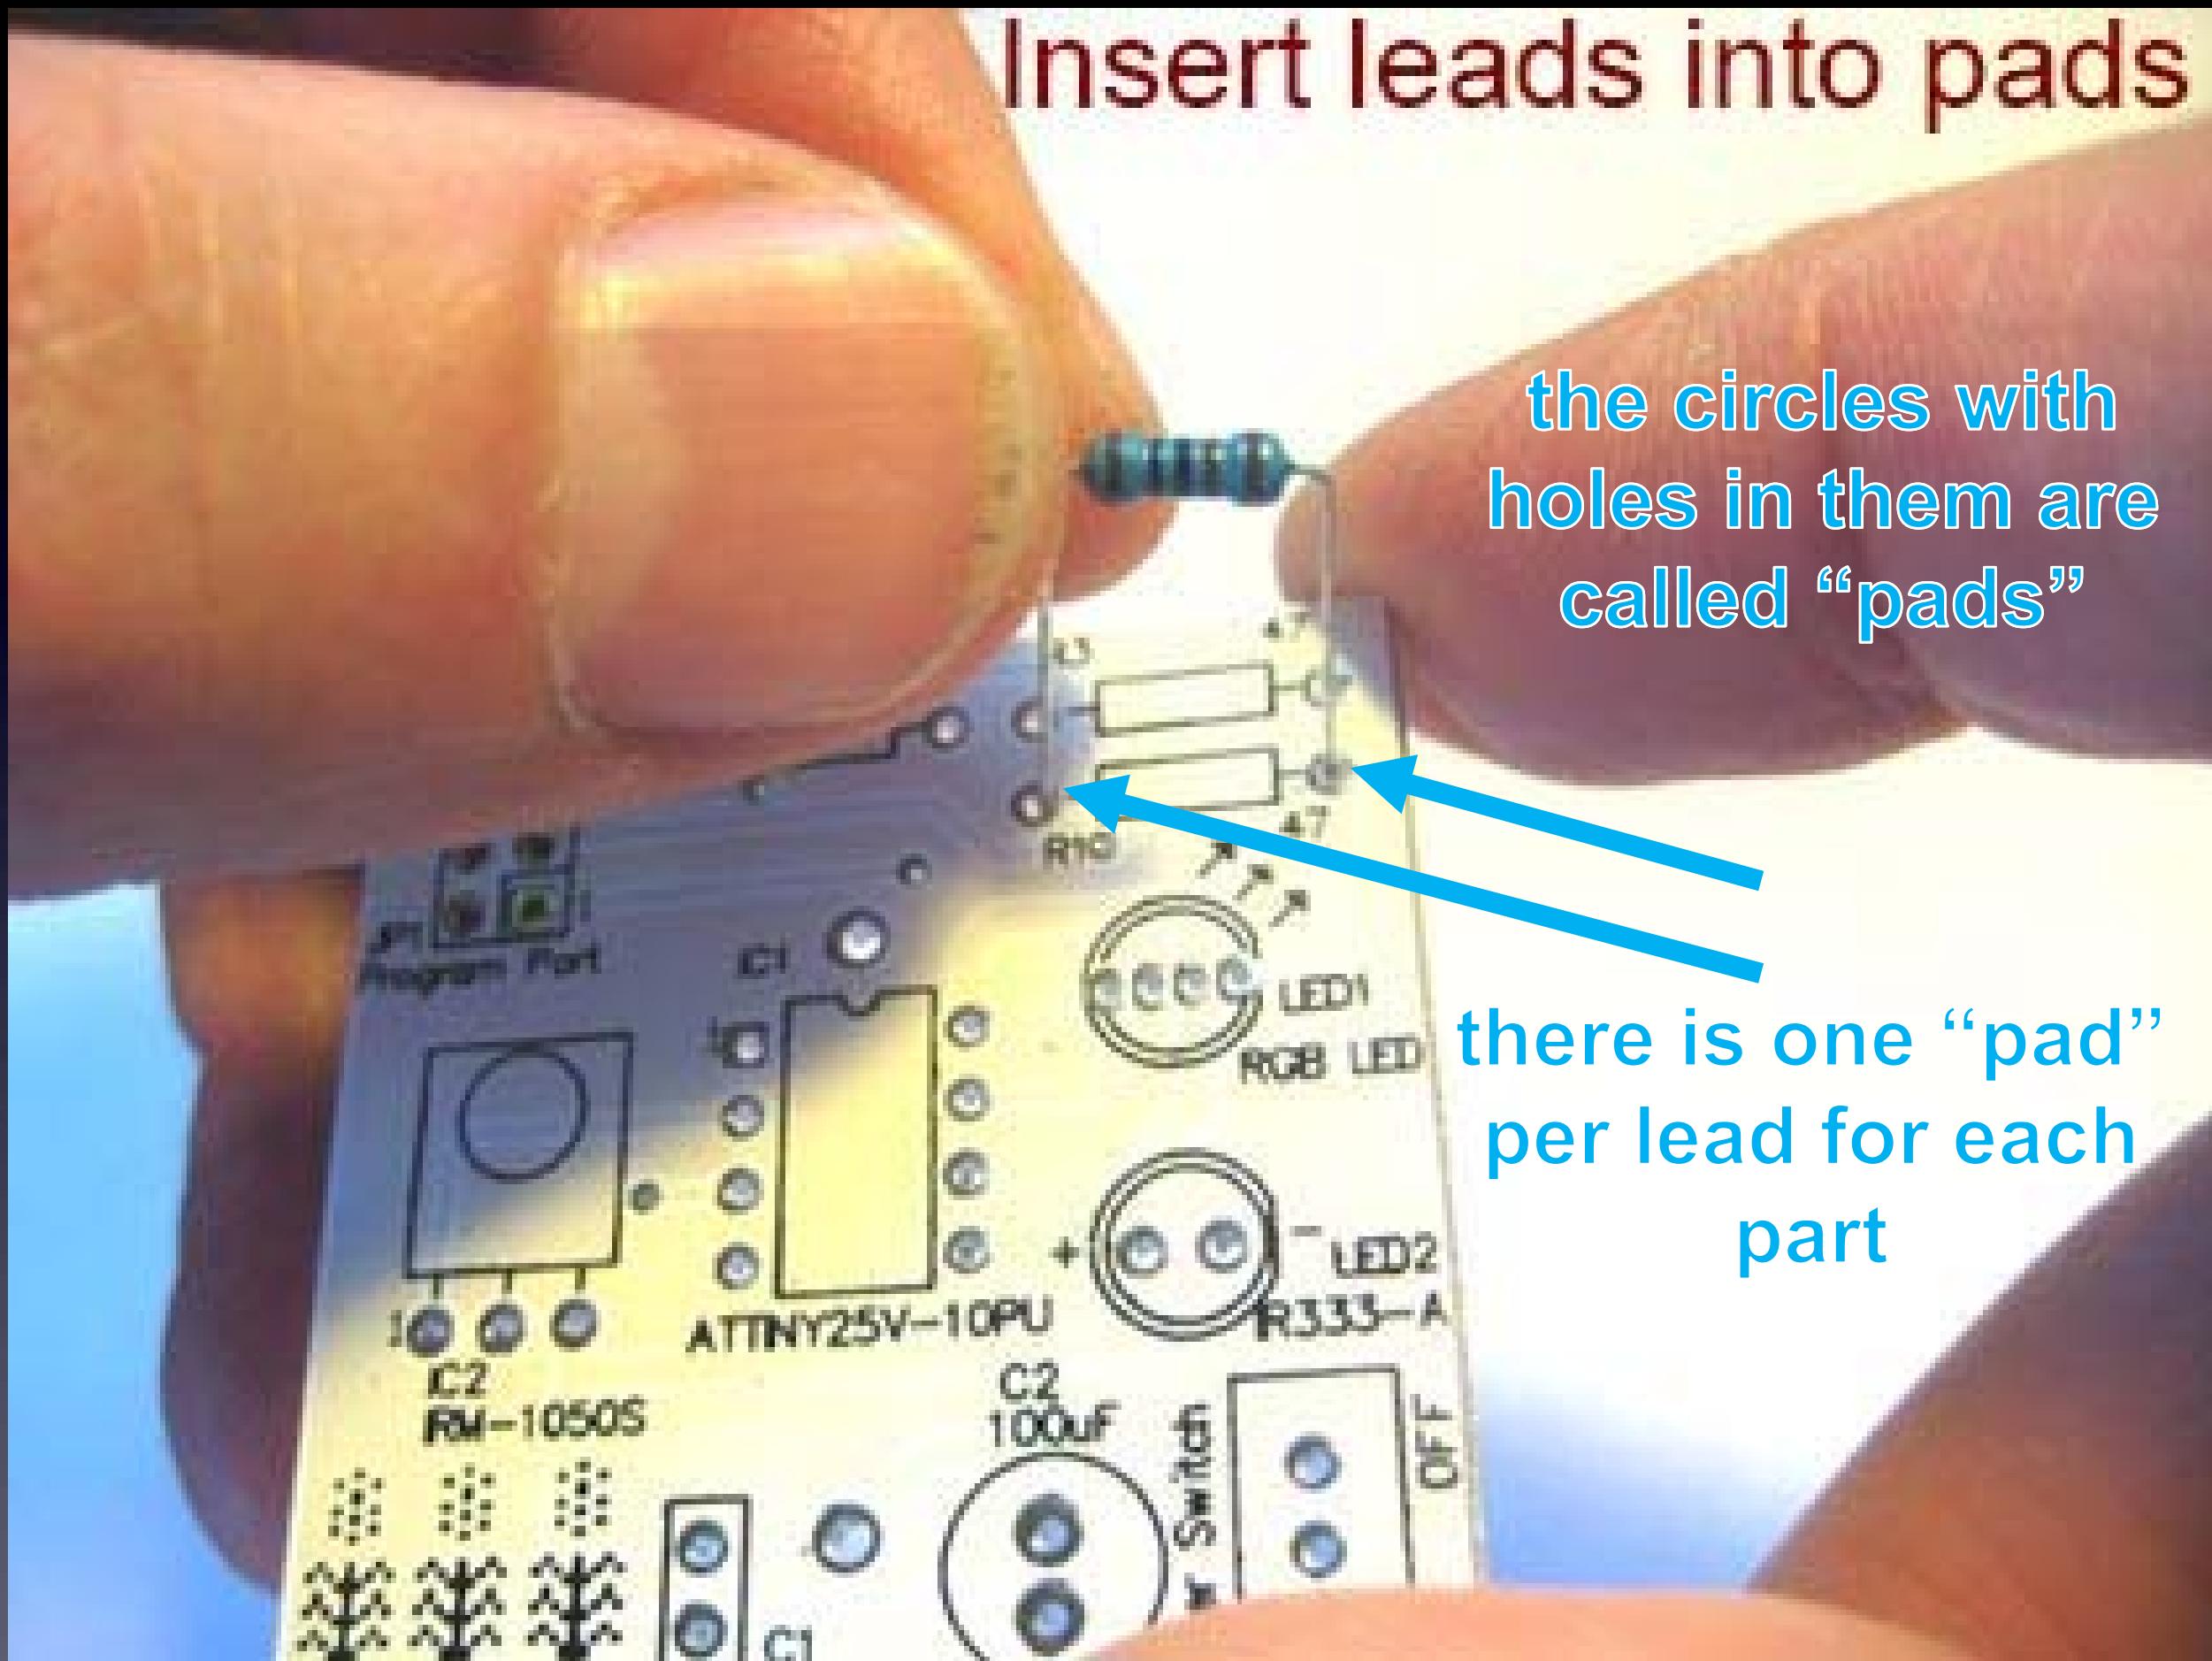

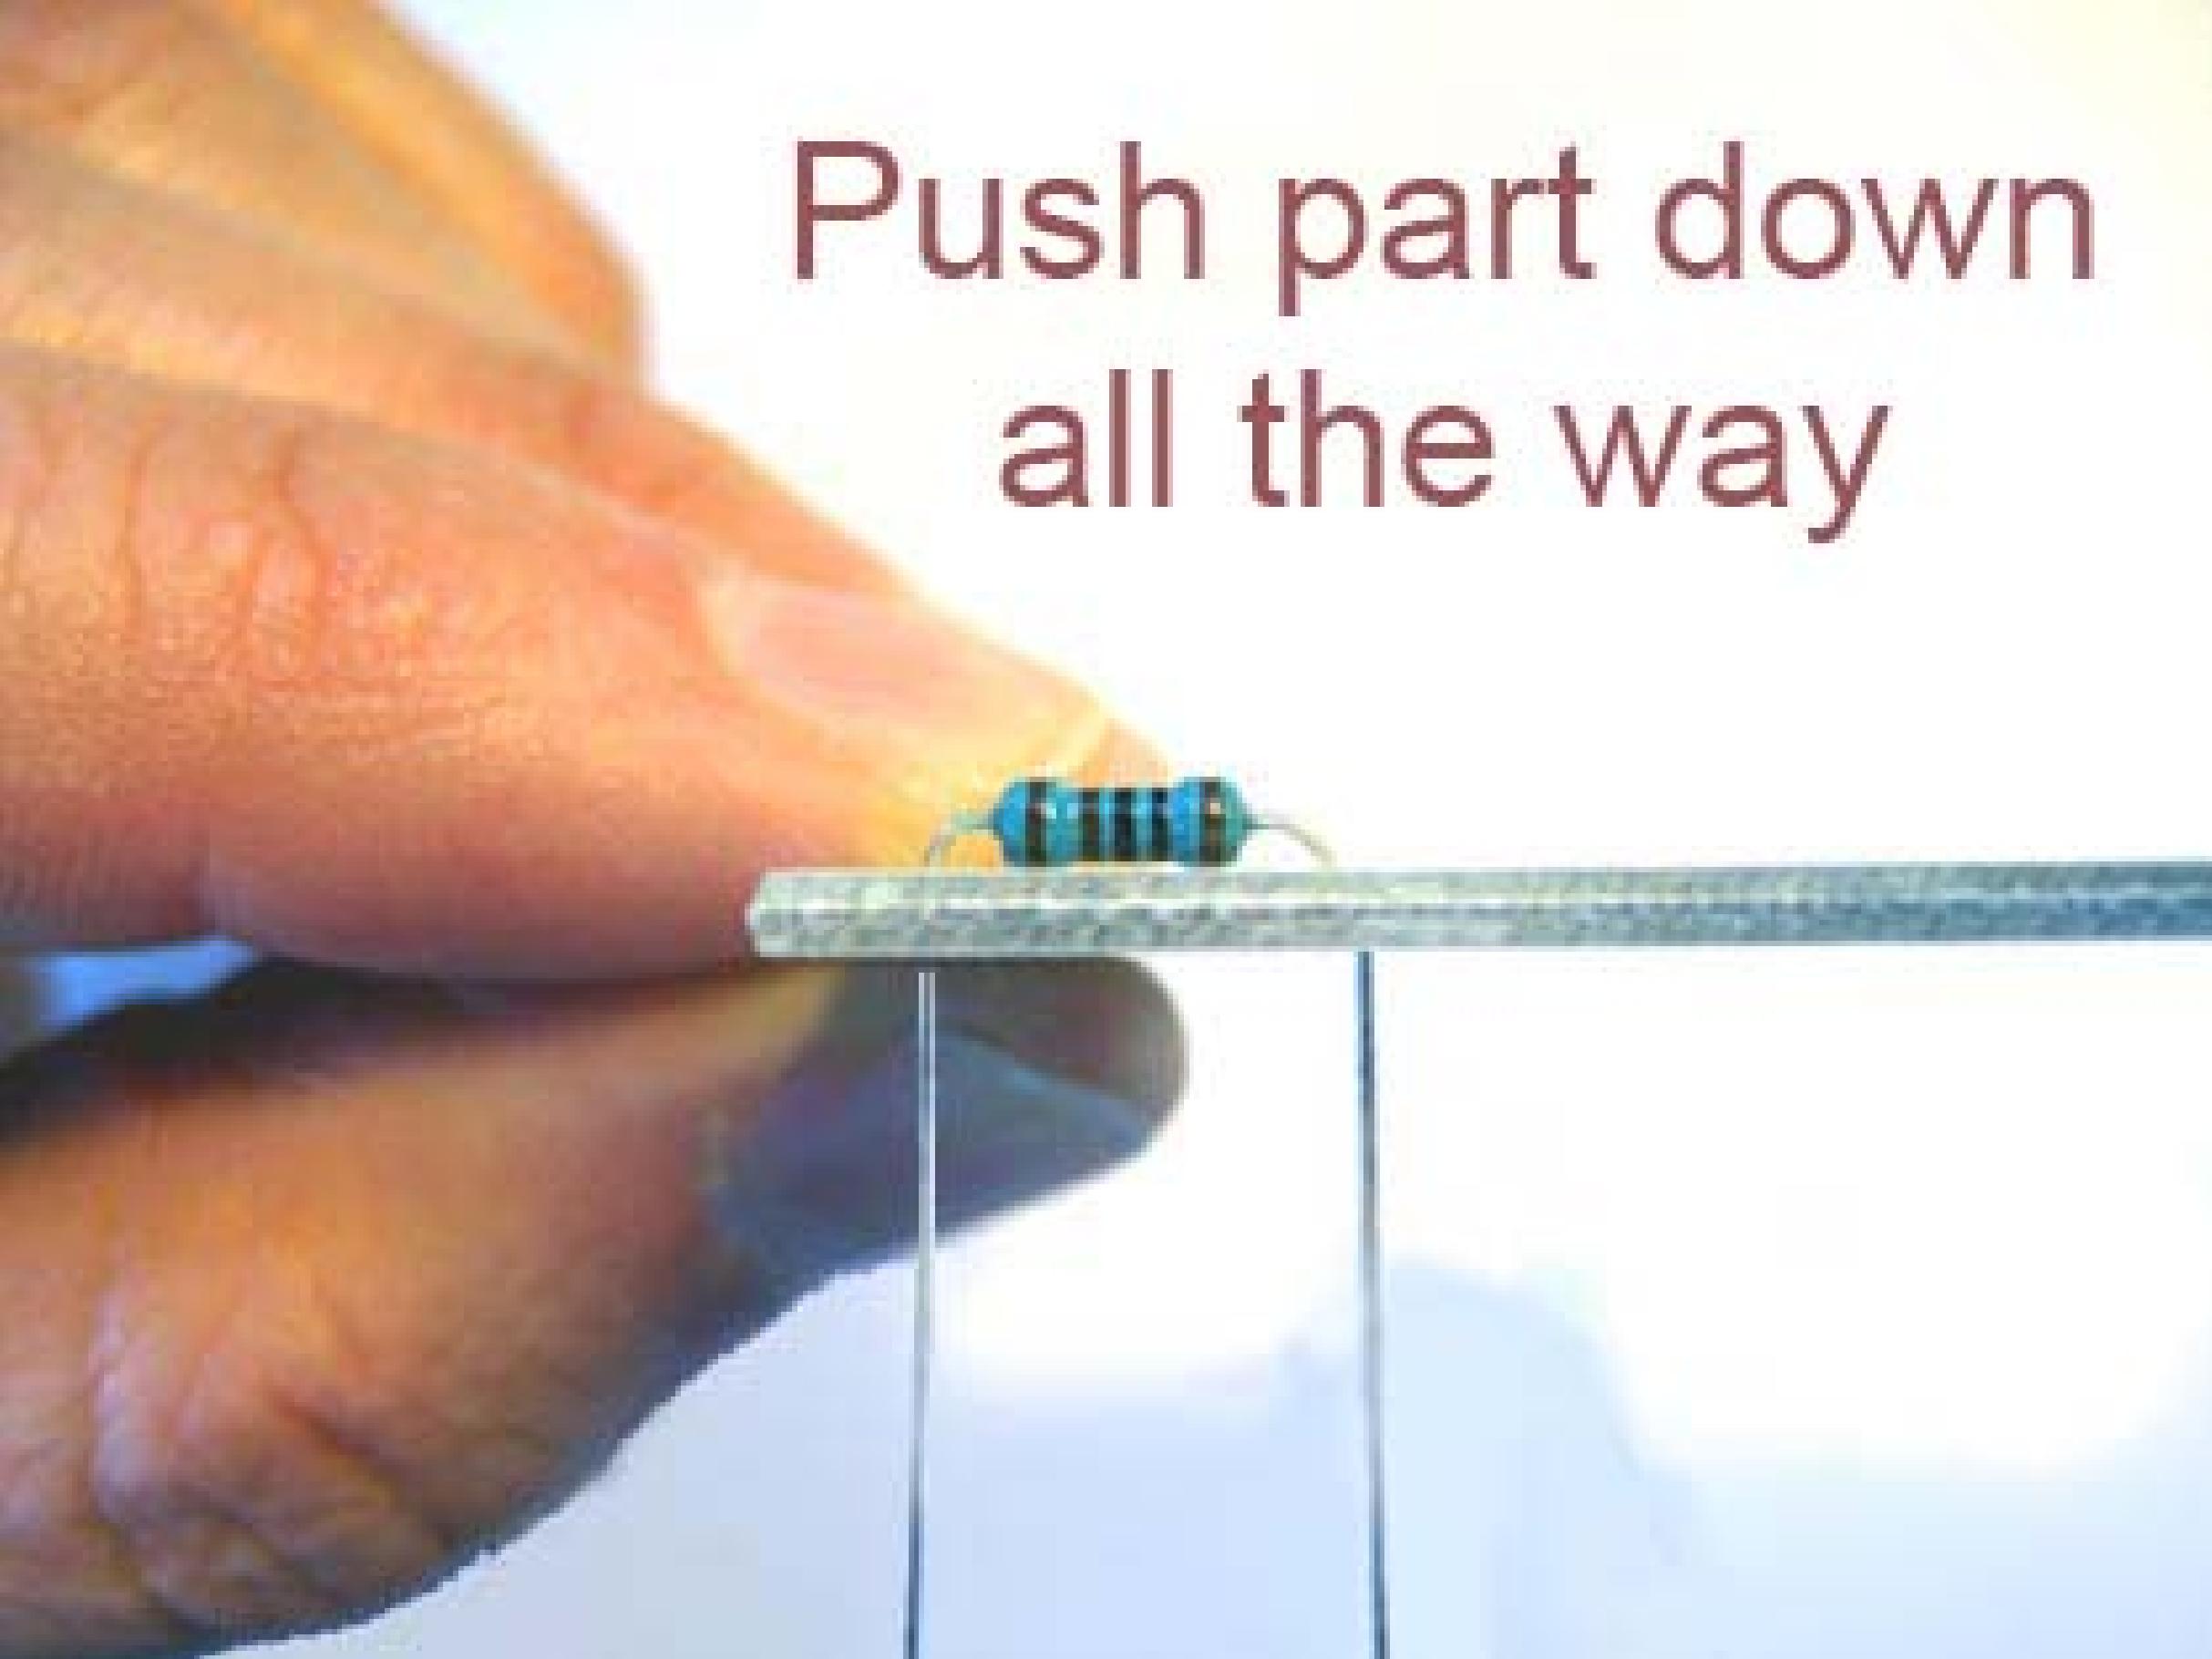

**this is how a resistor will look before
inserting it into the board**

Insert leads into pads

the circles with
holes in them are
called “pads”

there is one “pad”
per lead for each
part

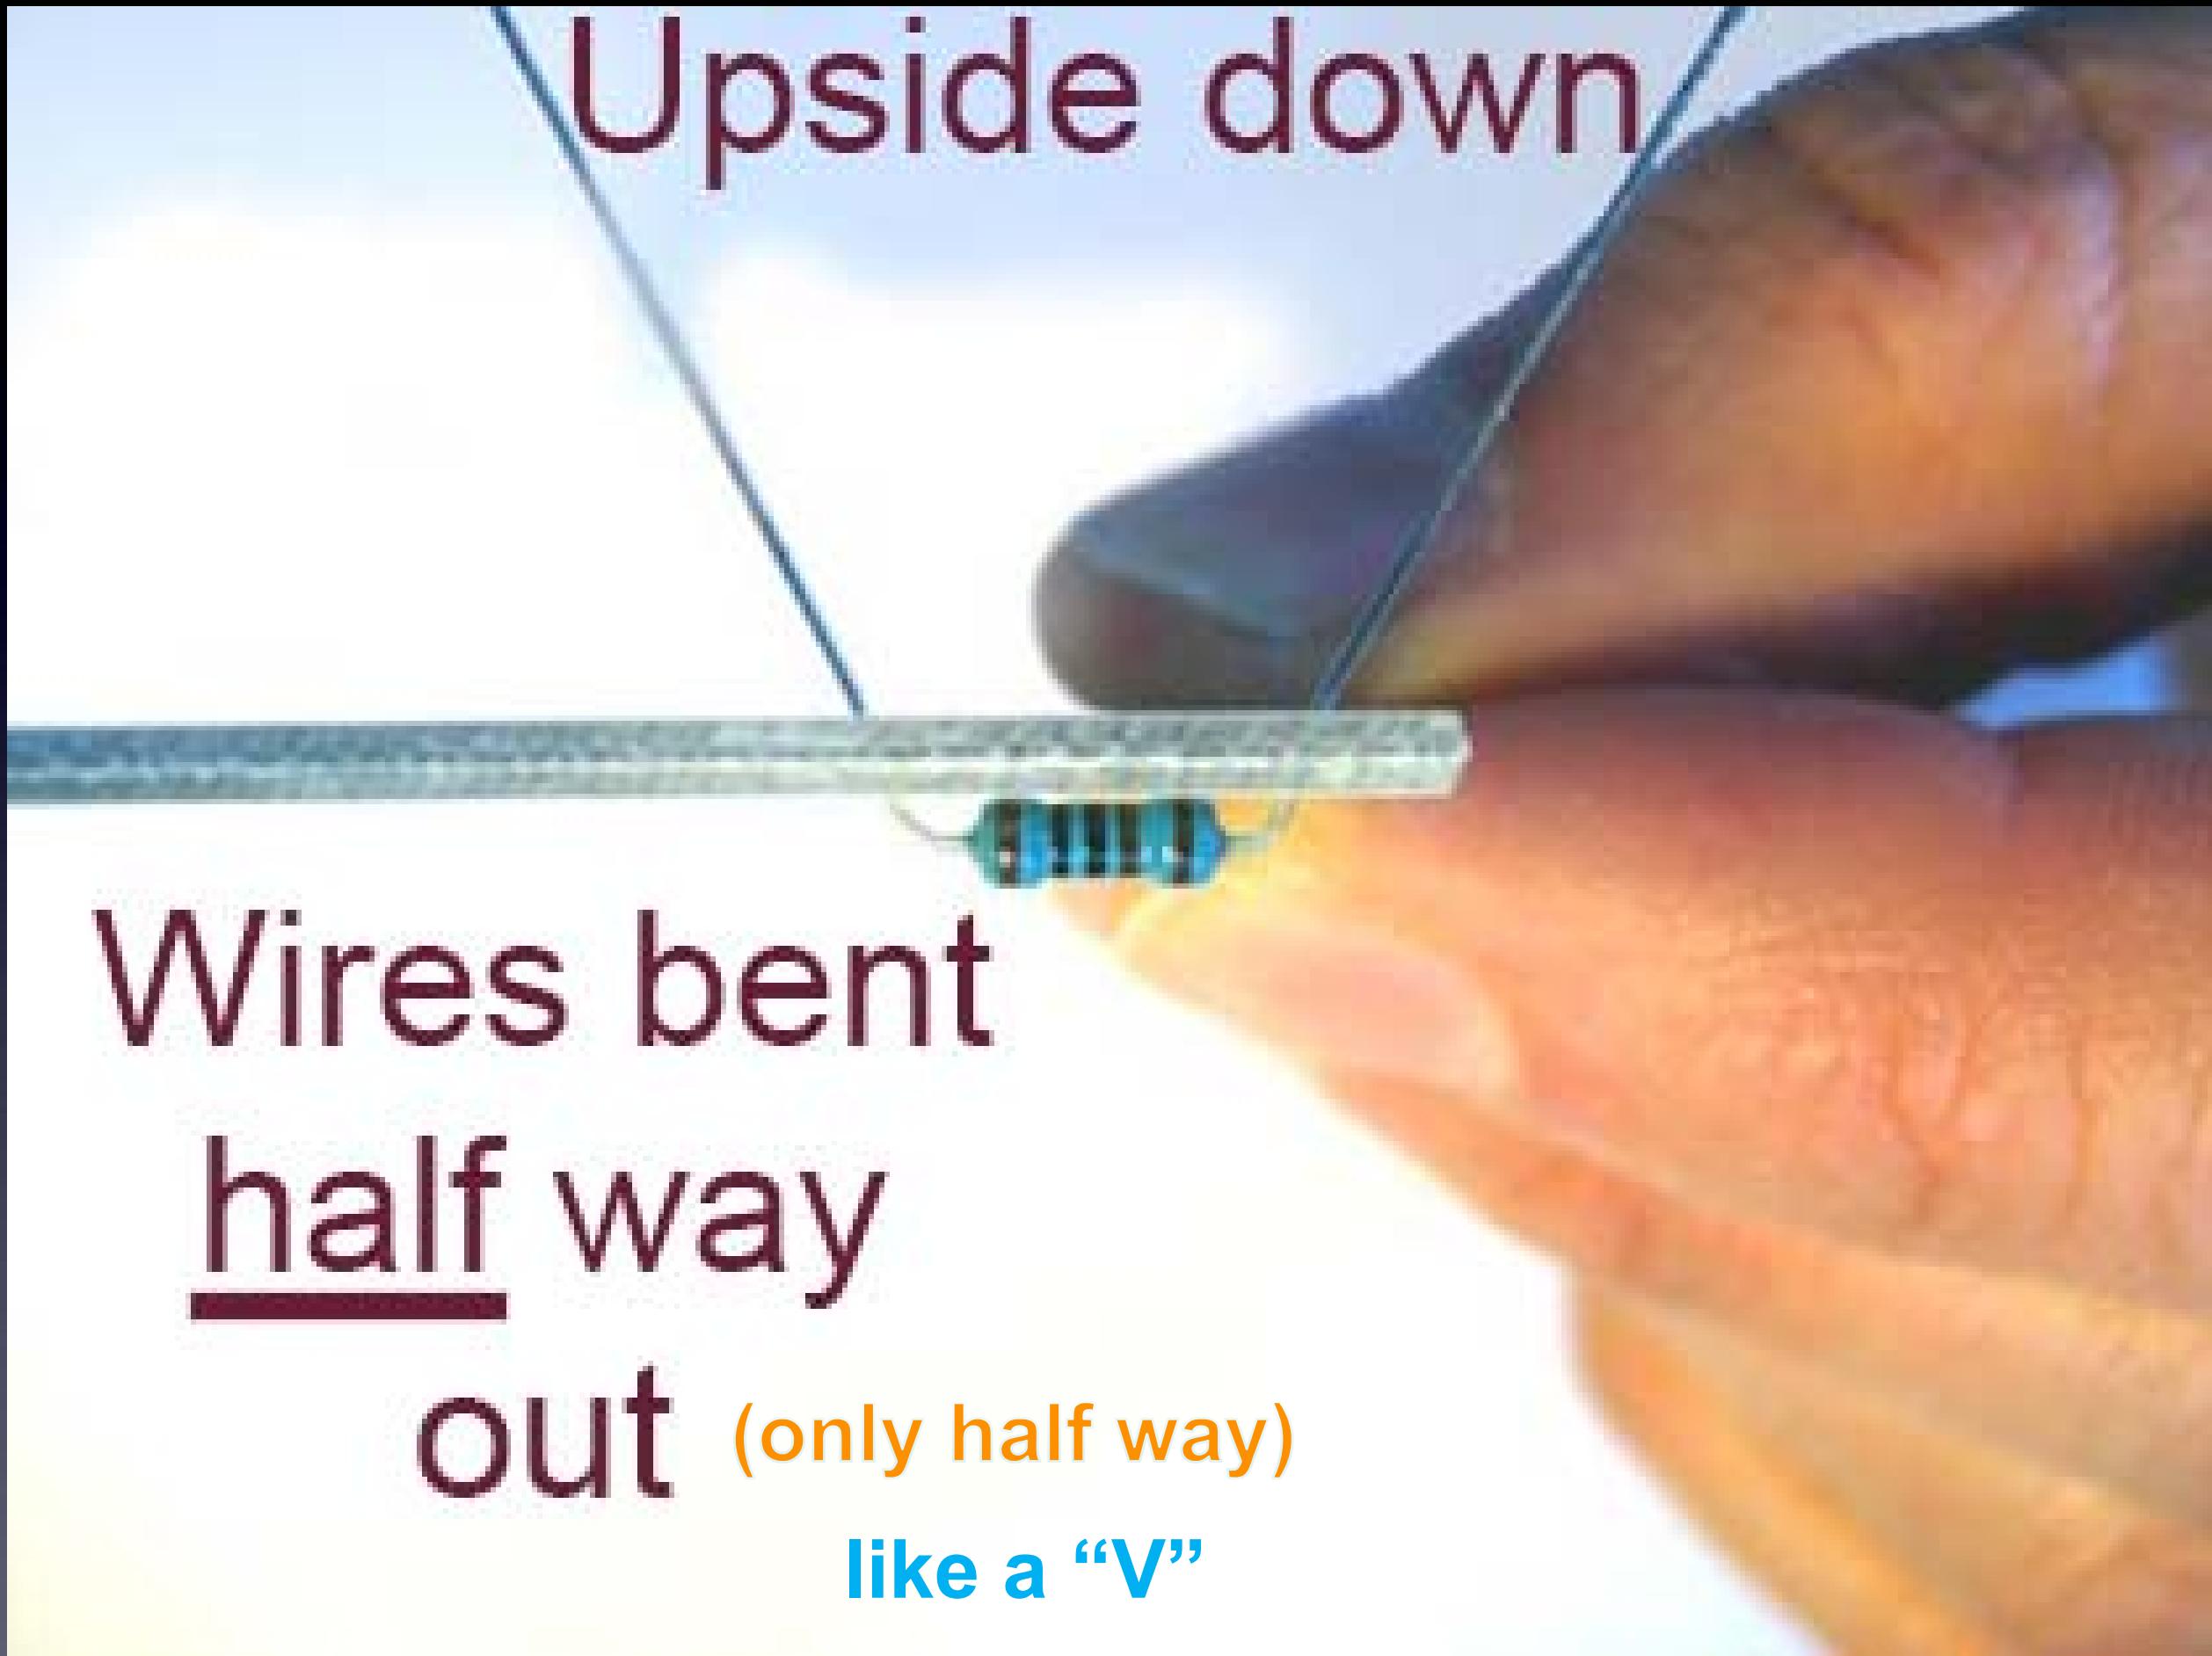

Push part down
all the way

Upside down

Wires bent
half way
out (only half way)
like a “V”

so that the part won't fall out while soldering it

How to hold a soldering iron

(Like a pencil – held from underneath)

Important

The best kind of solder for DIY electronics:

(Sn – Tin / Pb – Lead)

63/37 rosin core,
0.031" (0.8mm) diameter (or smaller)

(60/40 is also good)

Note:

Most
Lead-Free solder
has poisonous fumes!

A good kind of solder for DIY electronics:

This is the only good Lead-Free solder I have found!
(after years of searching)

**Kester
K100LD Rosin
(not “No Clean”)**
0.031" diameter (0.8mm)

A good kind of solder for DIY electronics:

*This is the only good Lead-Free solder I have found!
(after years of searching)*

Kester K100LD Rosin Solder

0.031" diameter (0.8mm)

Note:

If use **Lead-Free** solder
it is *helpful*
to also have
flux paste in a syringe
And Isopropyl Alcohol

99%

Another good kind of solder for DIY electronics:

This is another good Lead-Free solder I have found!

Duratool
D01685 Rosin

0.7mm diameter

*(as good as the
Kester K100LD Rosin)*

3 Safety Tips...

Safety Tip #1:

Hot !!

(When you touch the tip,
you *will* let go quickly every time!)

Safety Tip #2:

Soldering chemicals
are toxic

But they easily wash off your hands
with soap and water

Safety Tip #3:

(coming soon)

2 secrets
to good soldering...

Secret #1:

Clean the tip!

(before every solder connection)

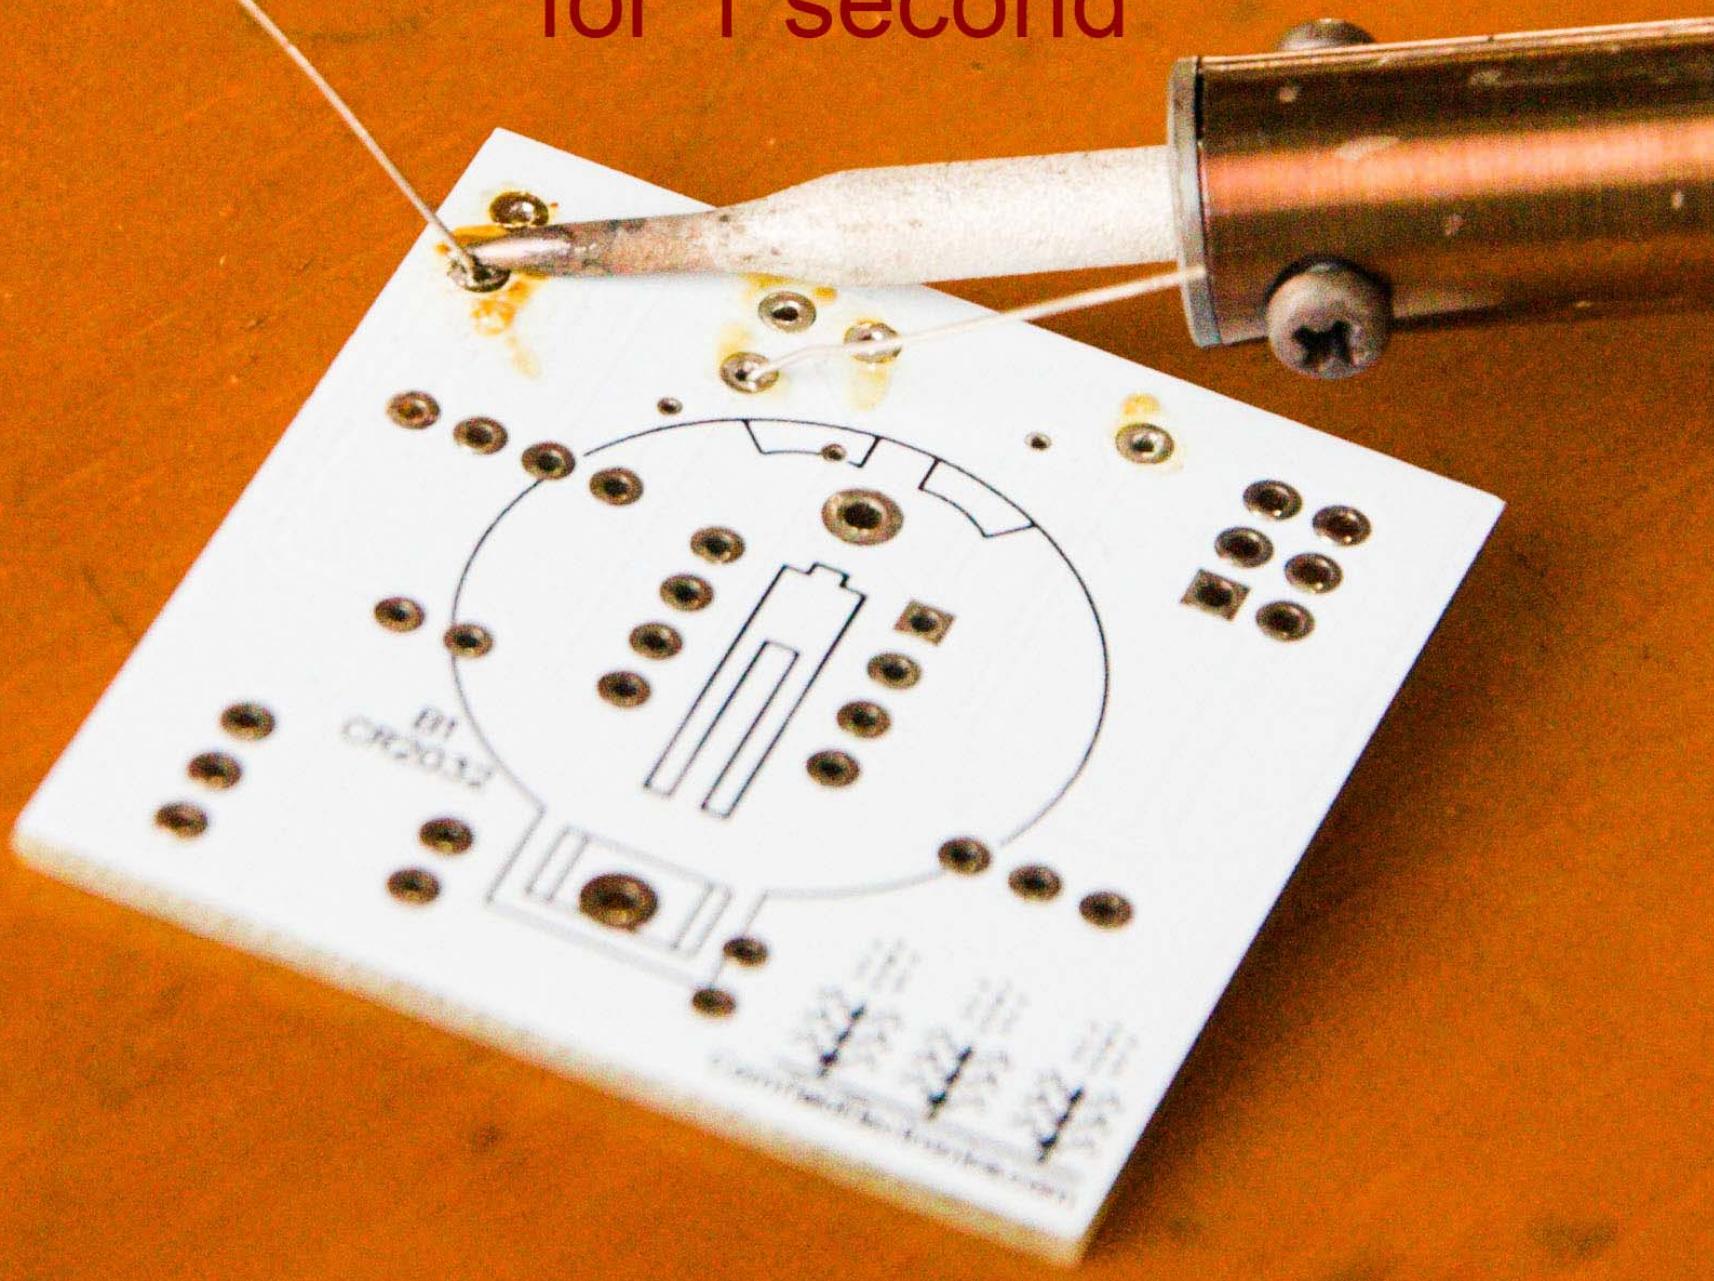

Bang (lightly) 3 times,

Swipe, Rotate, Swipe (on the sponge):

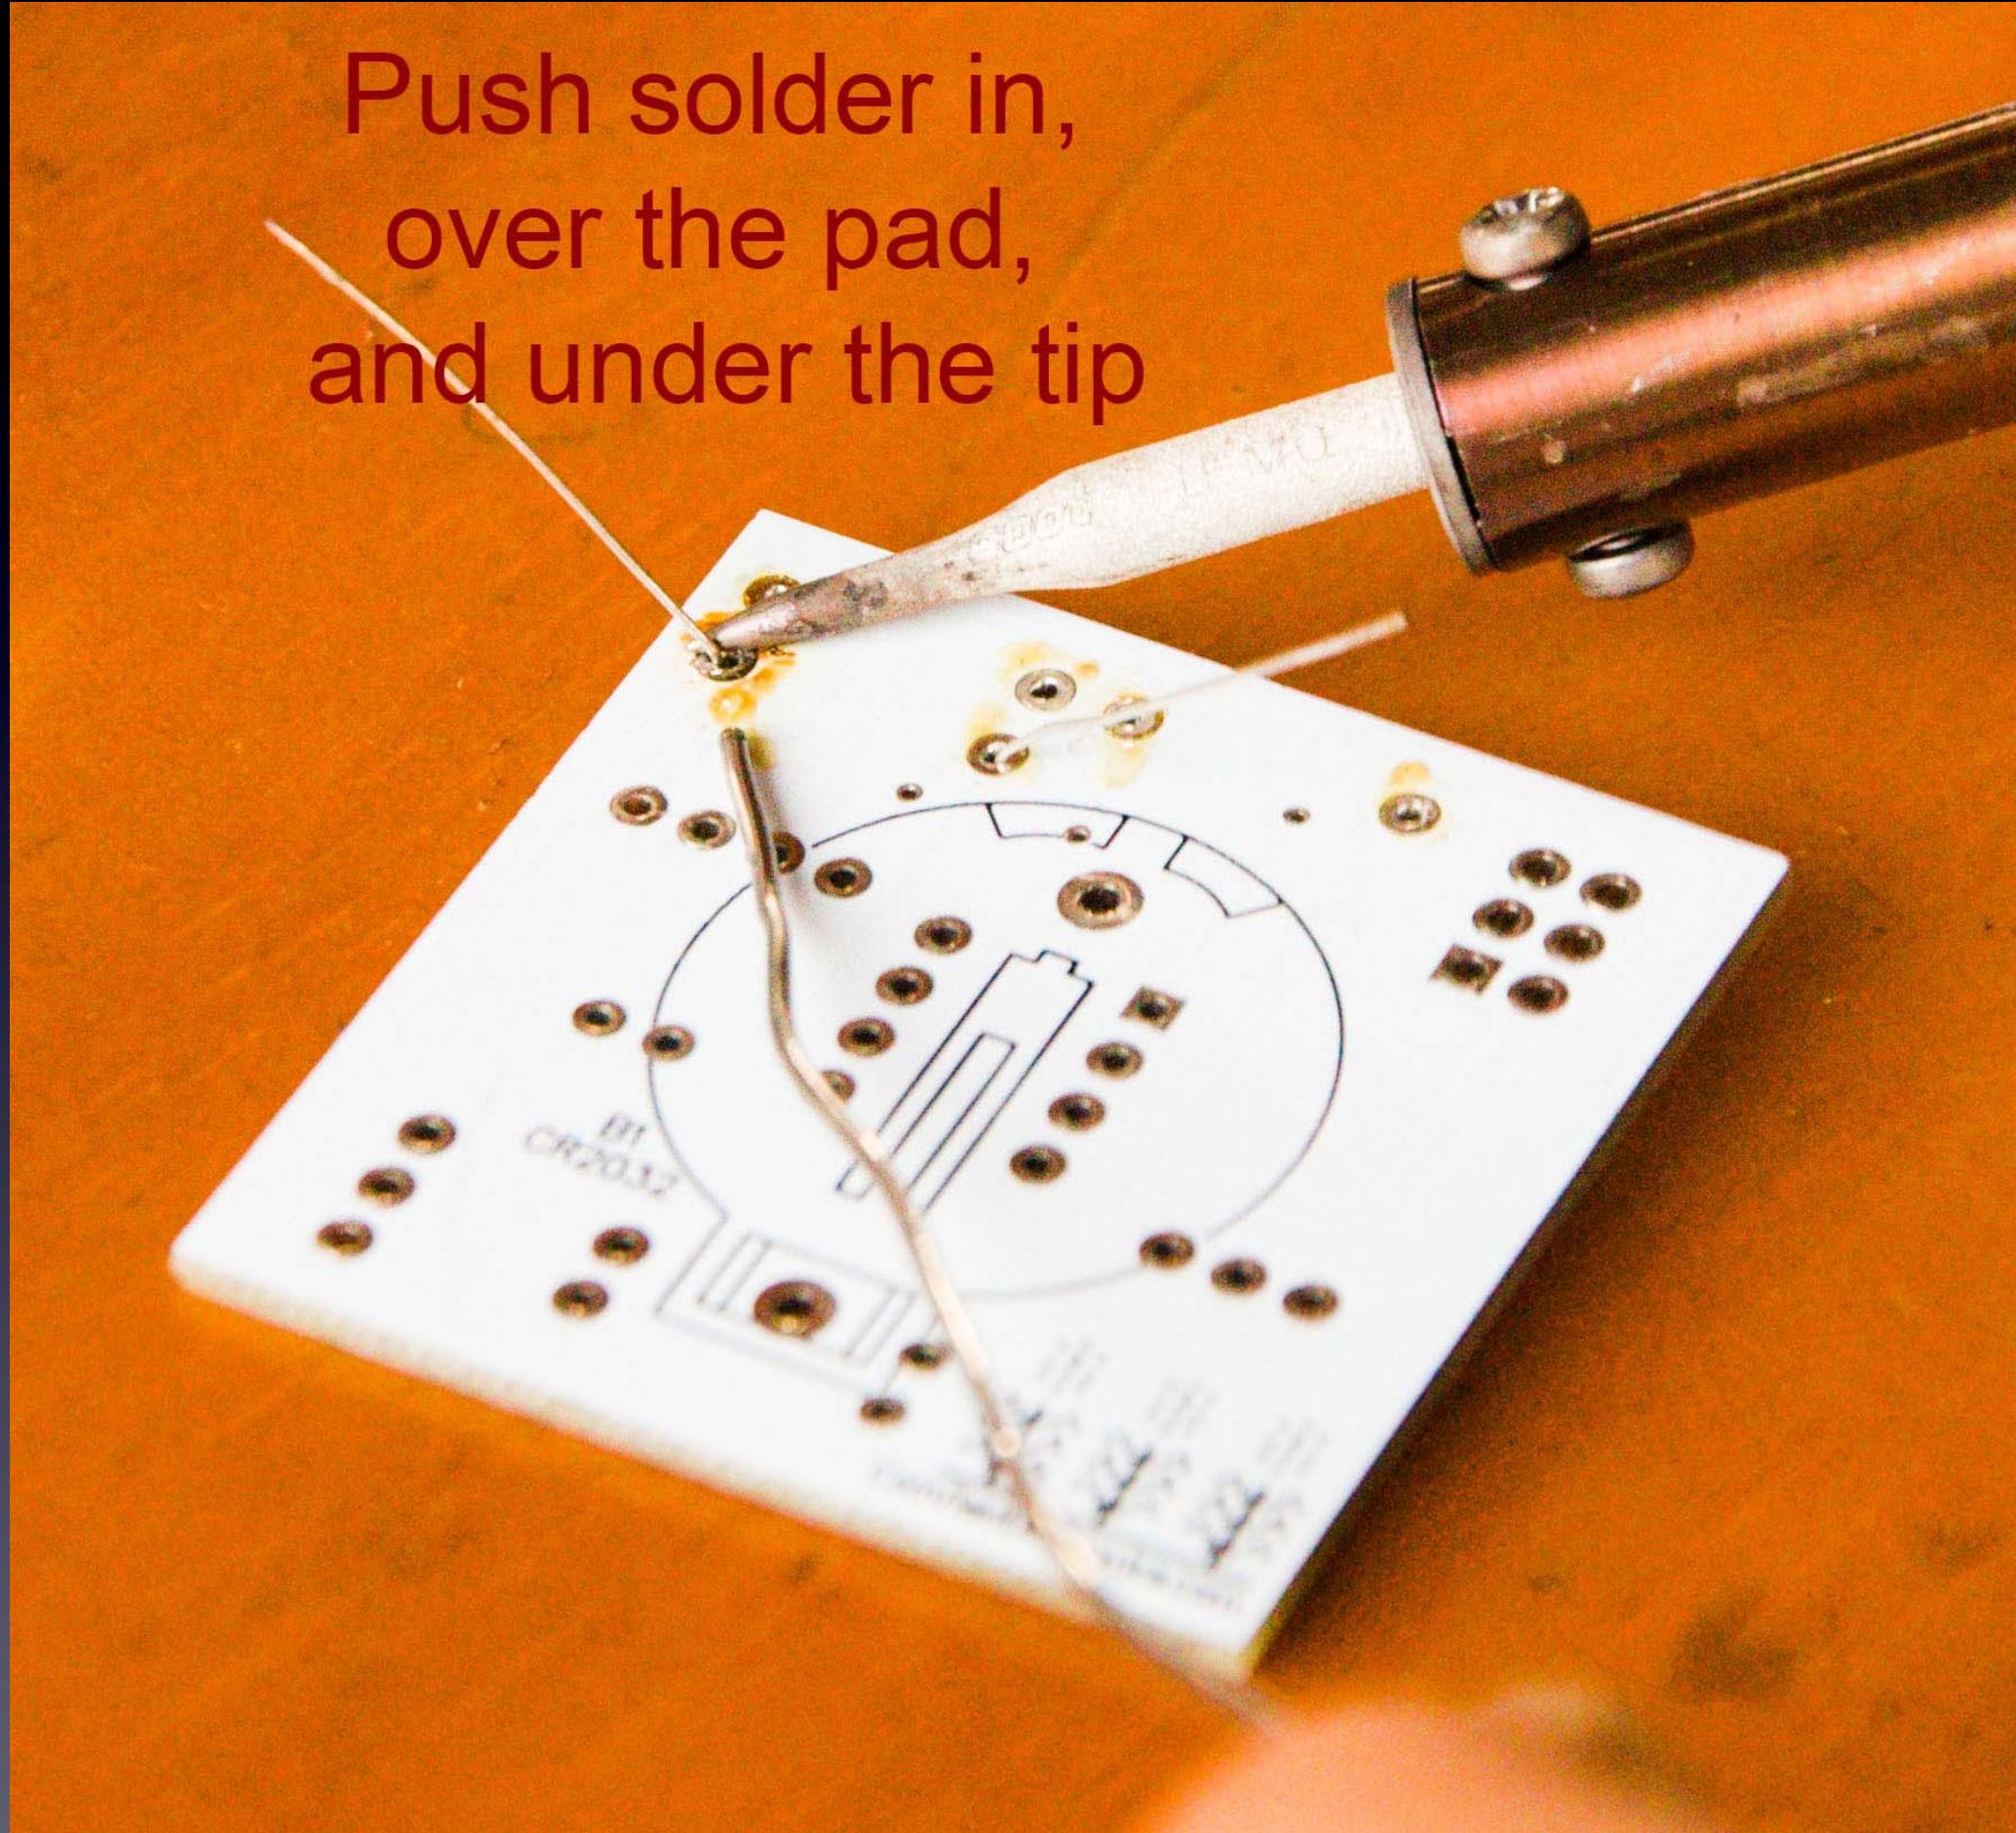

Keep the tip shiny silver!

knock solder off the tip

Lay clean tip across half of the pad,
touching the pad and lead
for 1 second

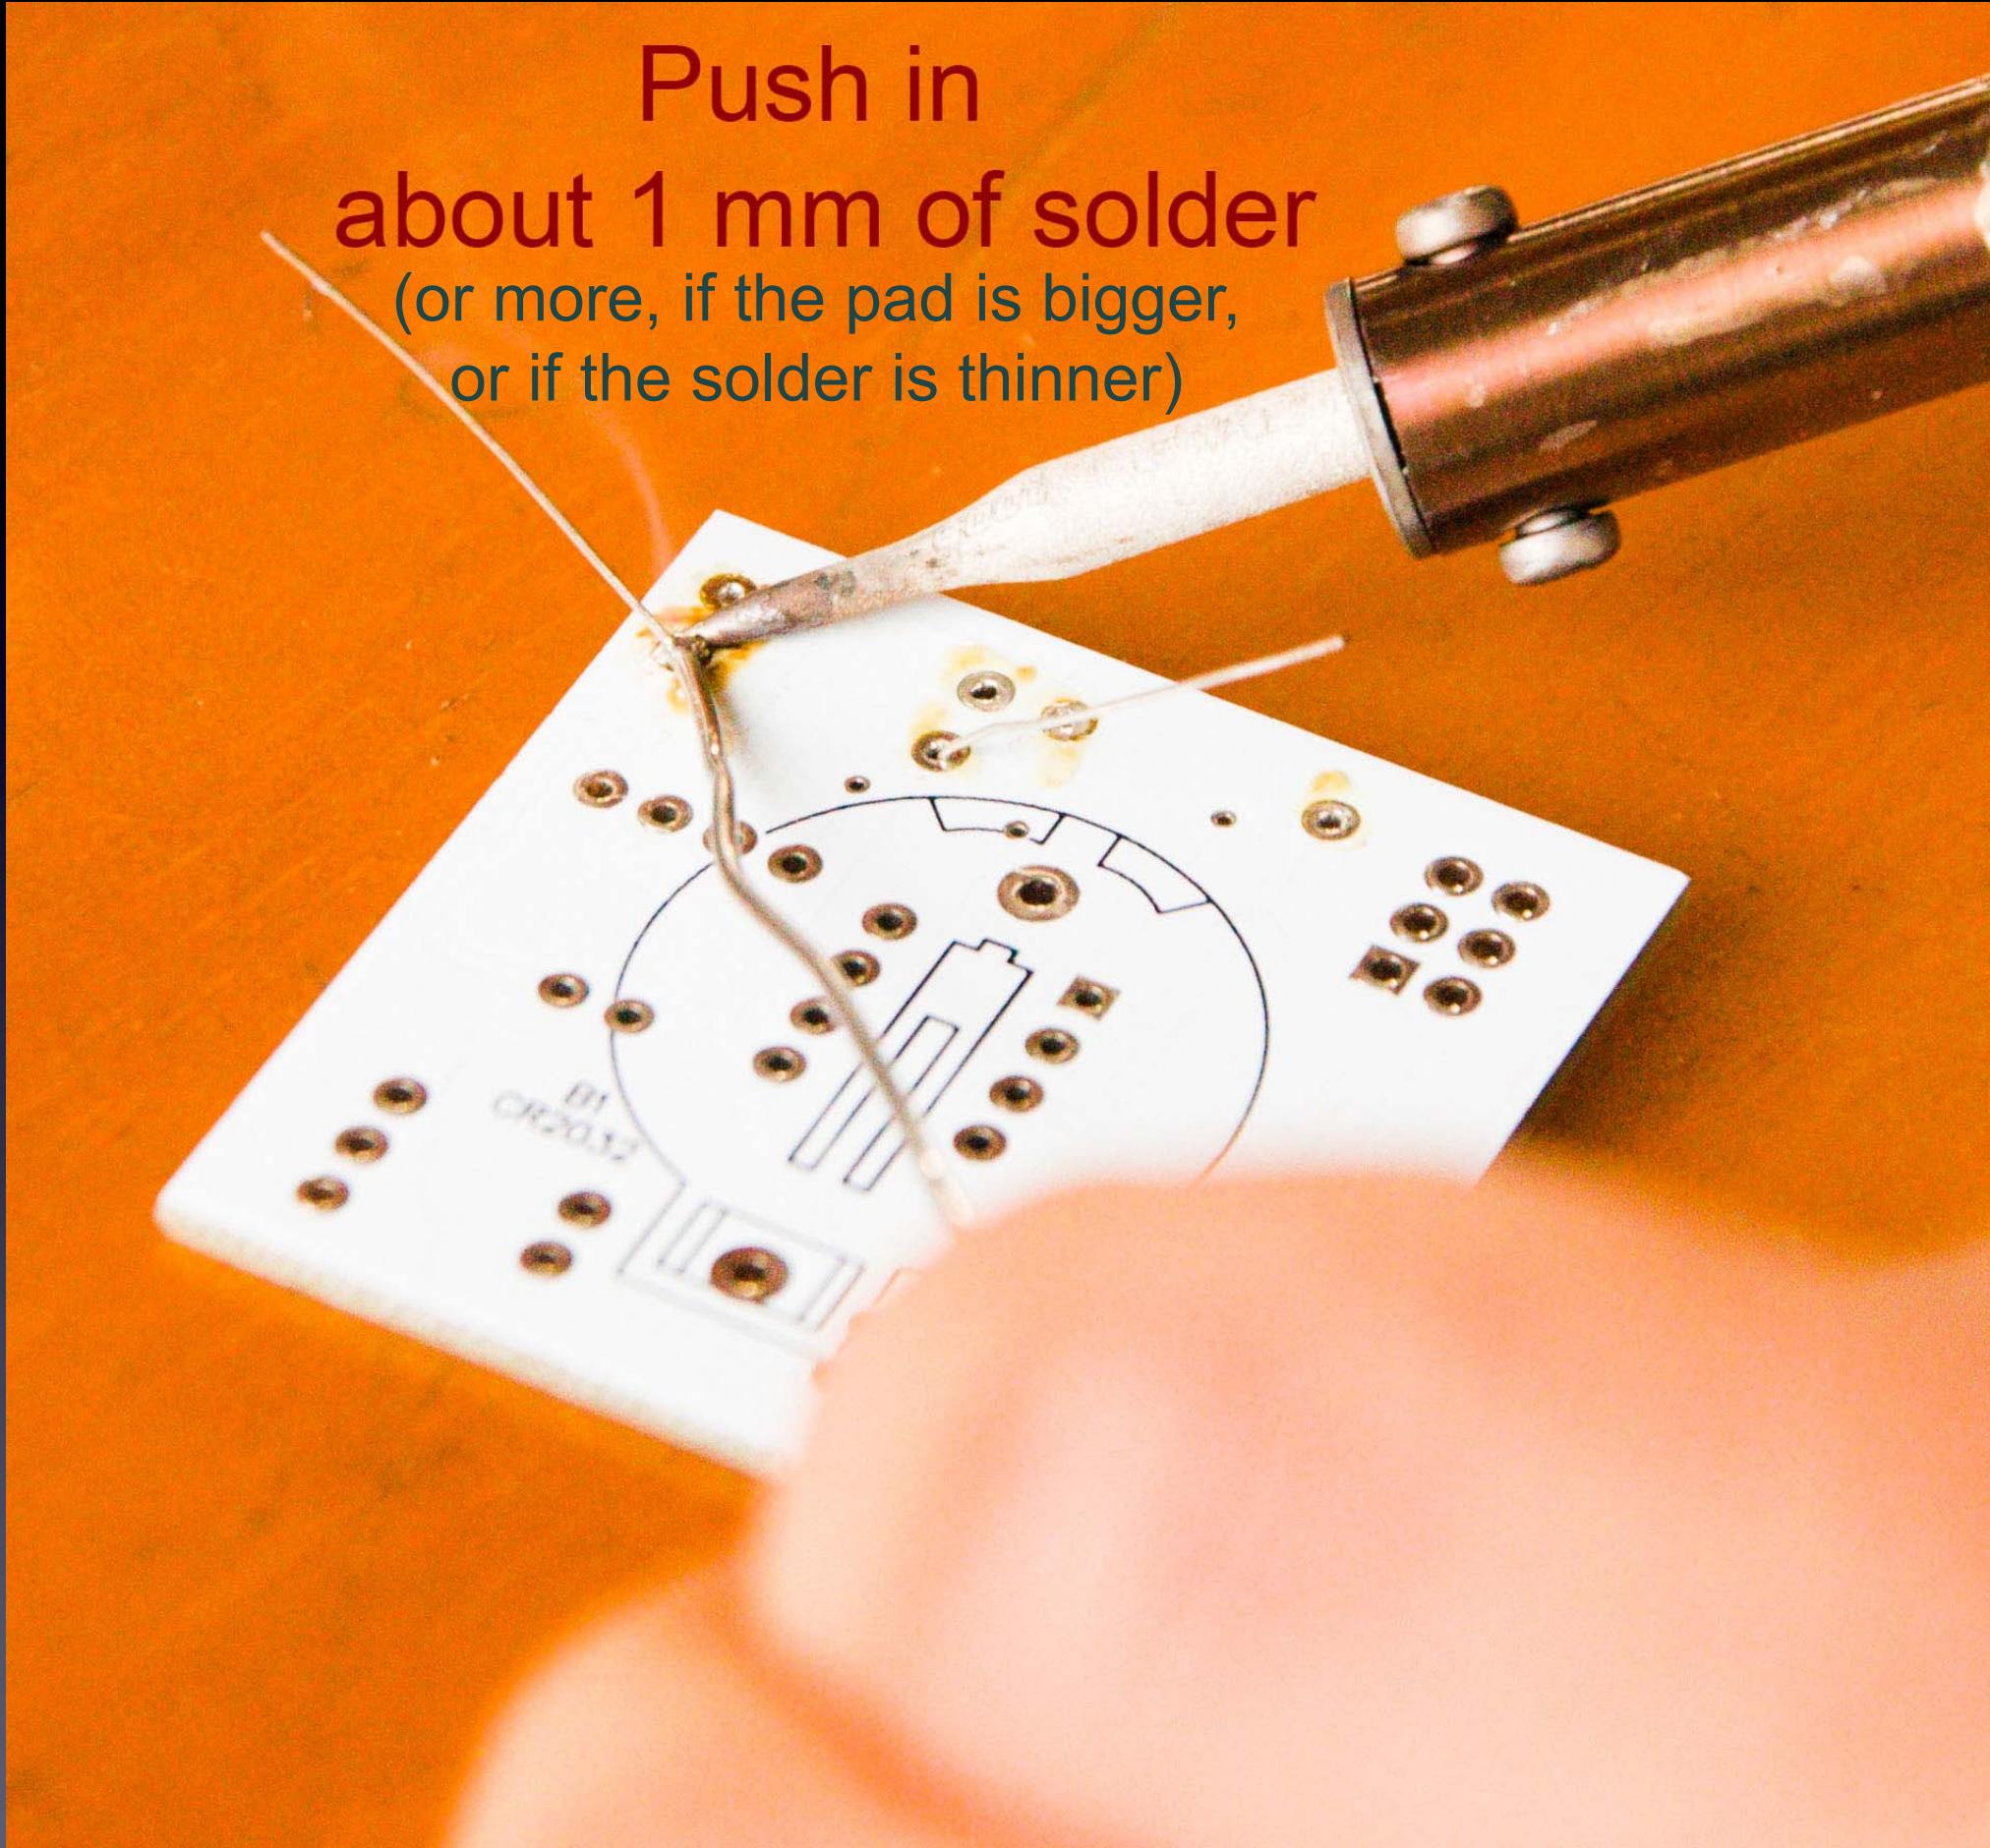

Do this quickly (slowly doesn't work well) – solder in & out in about 1 second

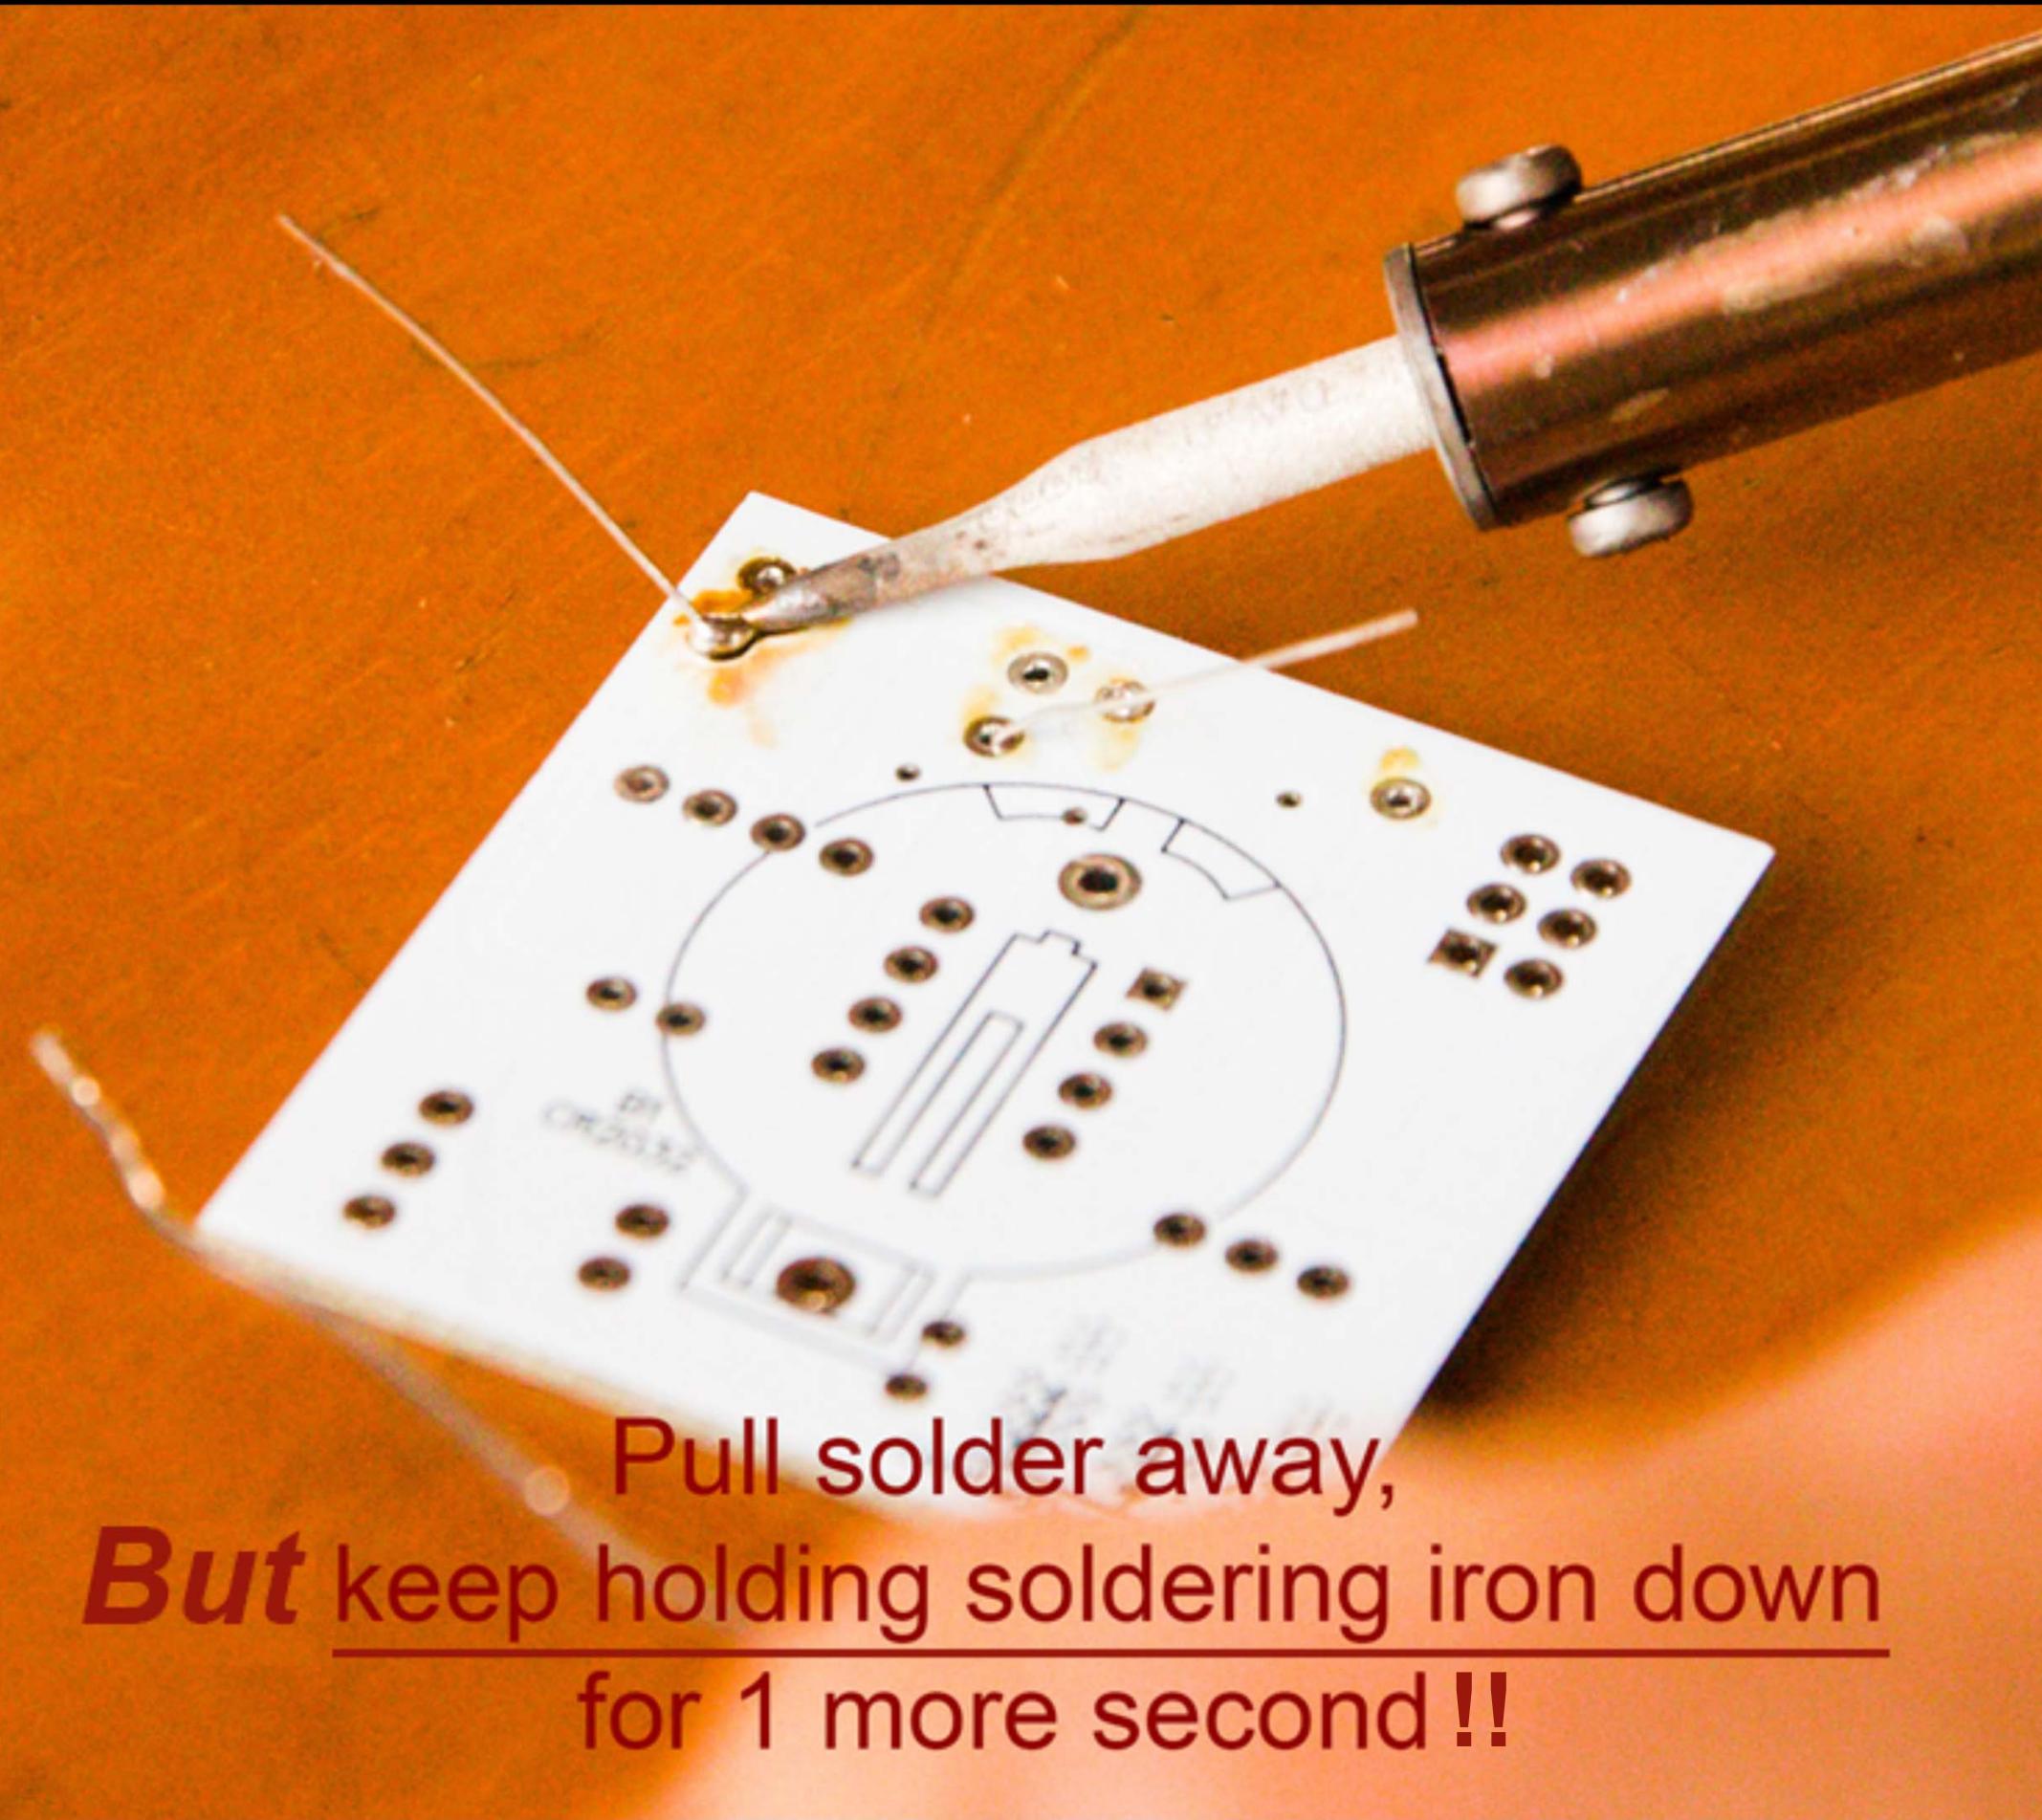

Make sure solder melts on the underside of the soldering iron tip
(not the side or top of the soldering iron tip)!

Do this quickly (slowly doesn't work well) – solder in & out in about 1 second

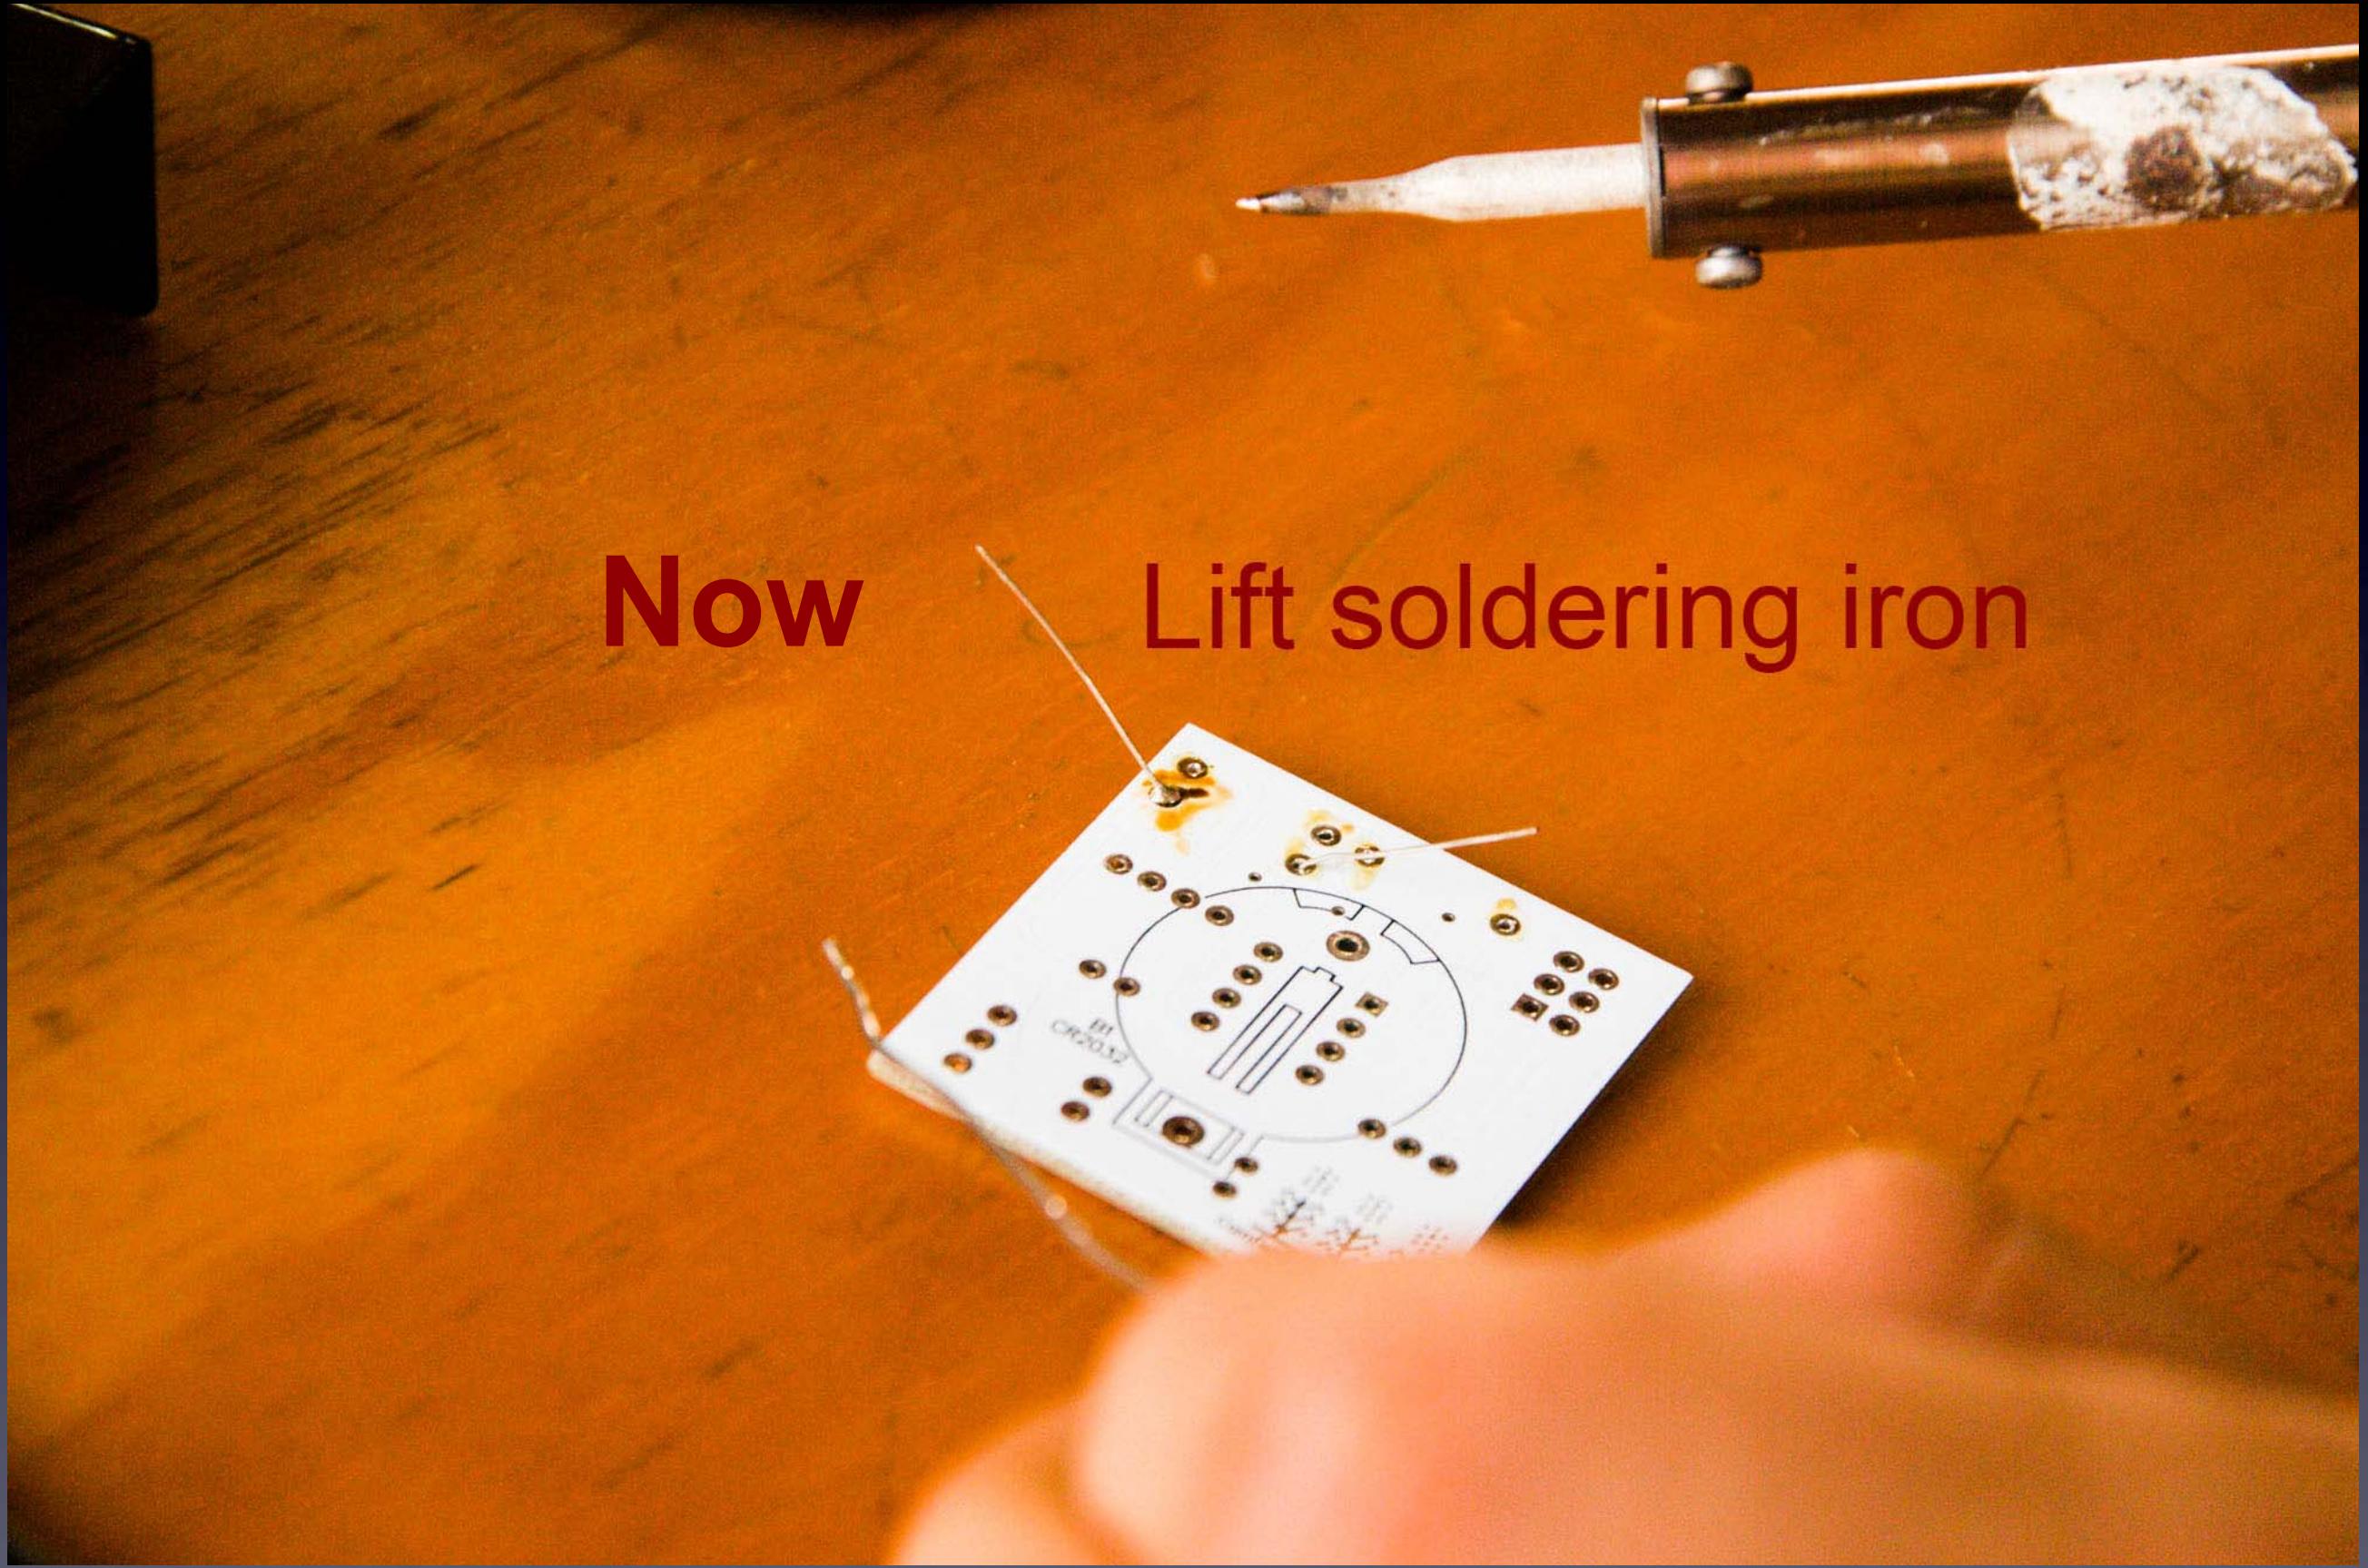

Make sure solder melts on the underside of the soldering iron tip
(not the side or top of the soldering iron tip)!

Pull solder away,
But keep holding soldering iron down
for 1 more second !!

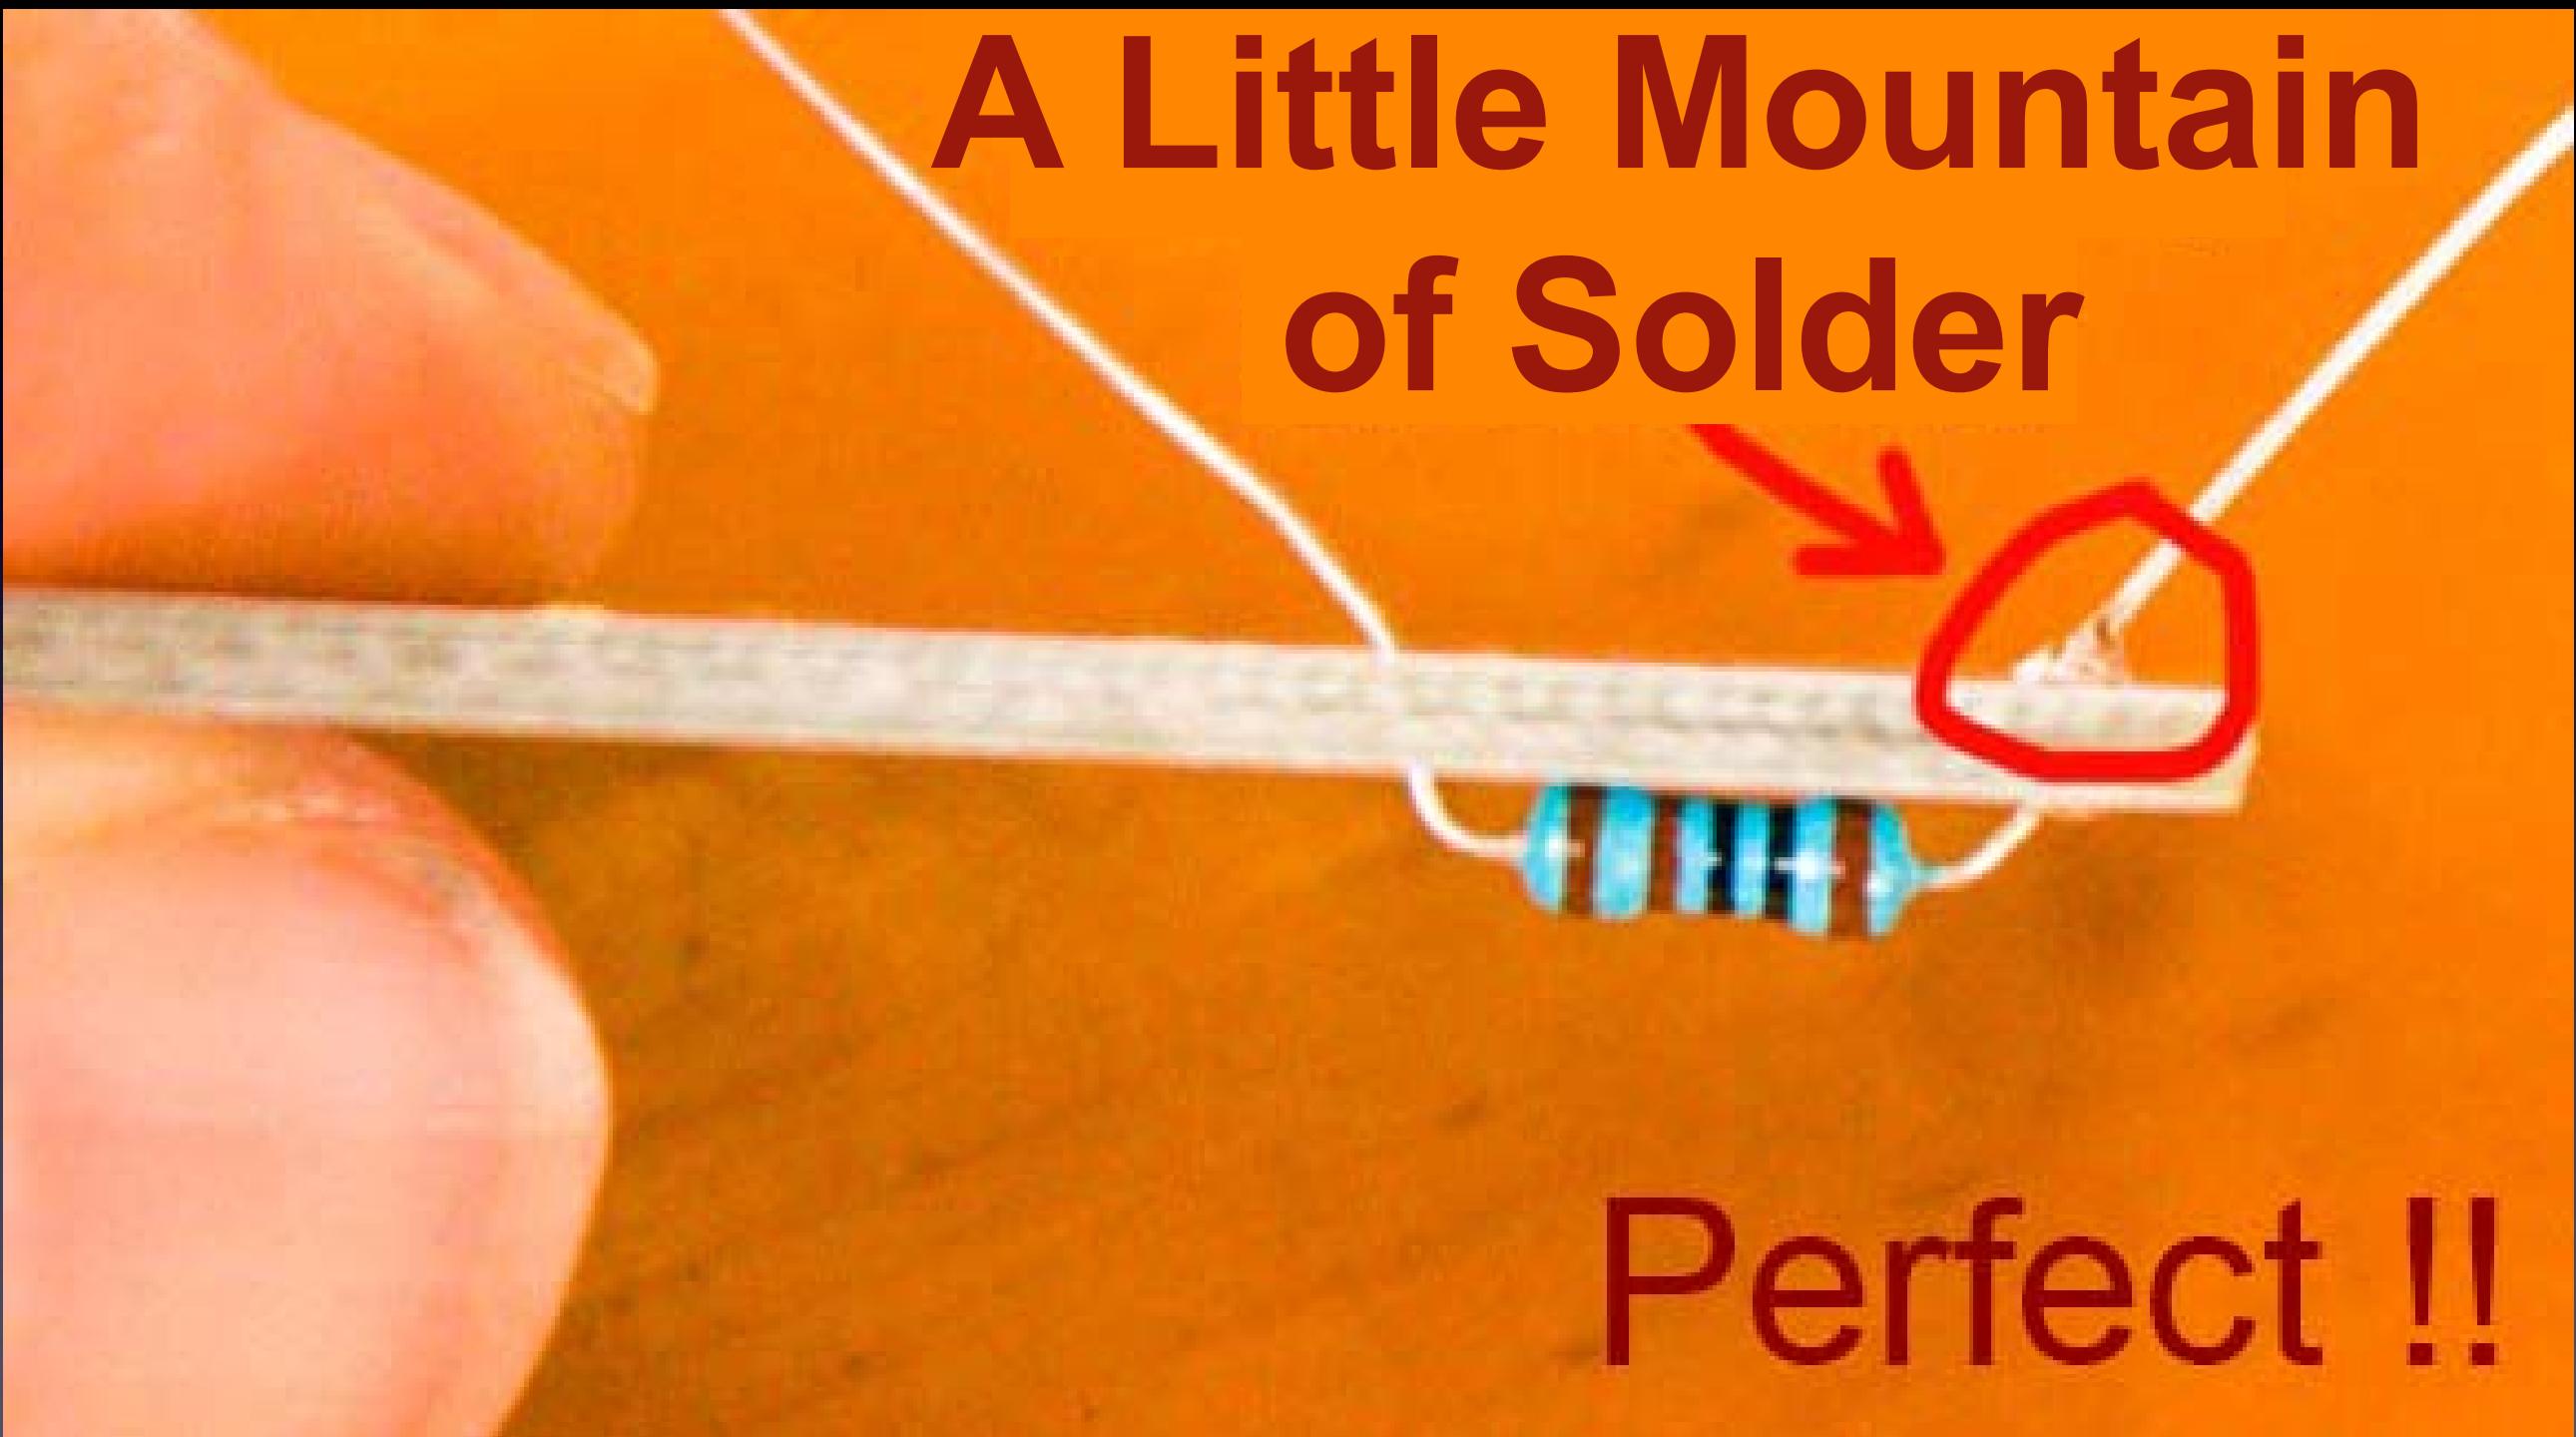

Secret #2:

Keep hot tip down
1 second
for solder to flow !!

Now

Lift soldering iron

A Little Mountain
of Solder

Perfect !!

If you can see any of the pad, or the hole, you need more solder – so, just do all the steps again to make it perfect.

The Rhythm !
is just as important as the preceding steps!

The Rhythm !
and speed (about 1 second per step)

The Rhythm !
and speed (about 1 second per step)
Clean the tip

The Rhythm !
and speed (about 1 second per step)

Tip Down

The Rhythm !
and speed (about 1 second per step)

Solder In

The Rhythm !
and speed (about 1 second per step)

Solder Out

The Rhythm !
and speed (about 1 second per step)

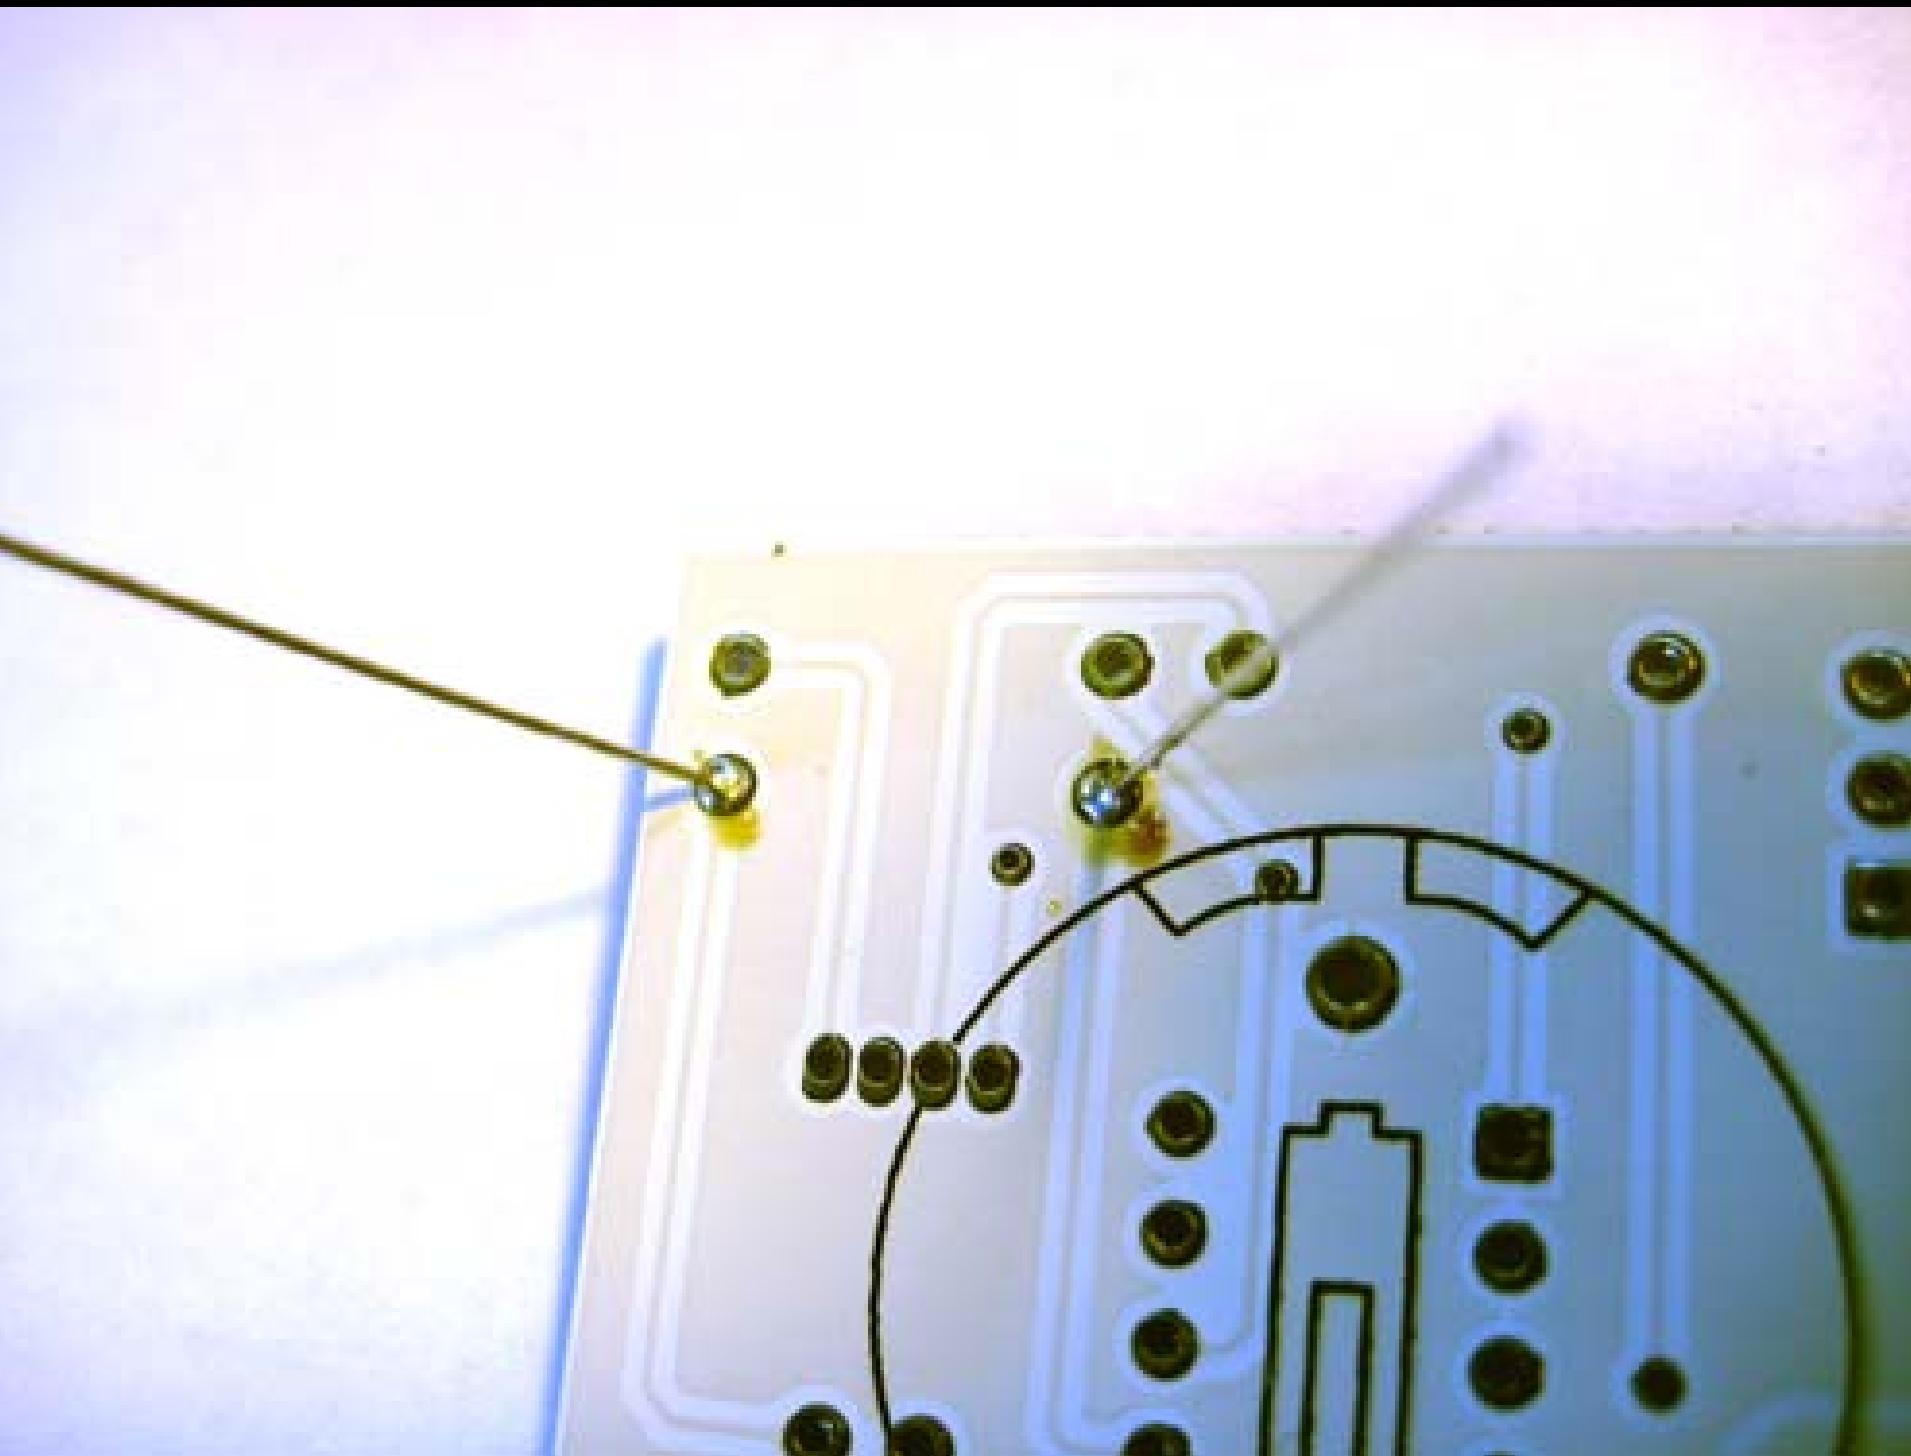

WAIT !

The Rhythm !
and speed (about 1 second per step)

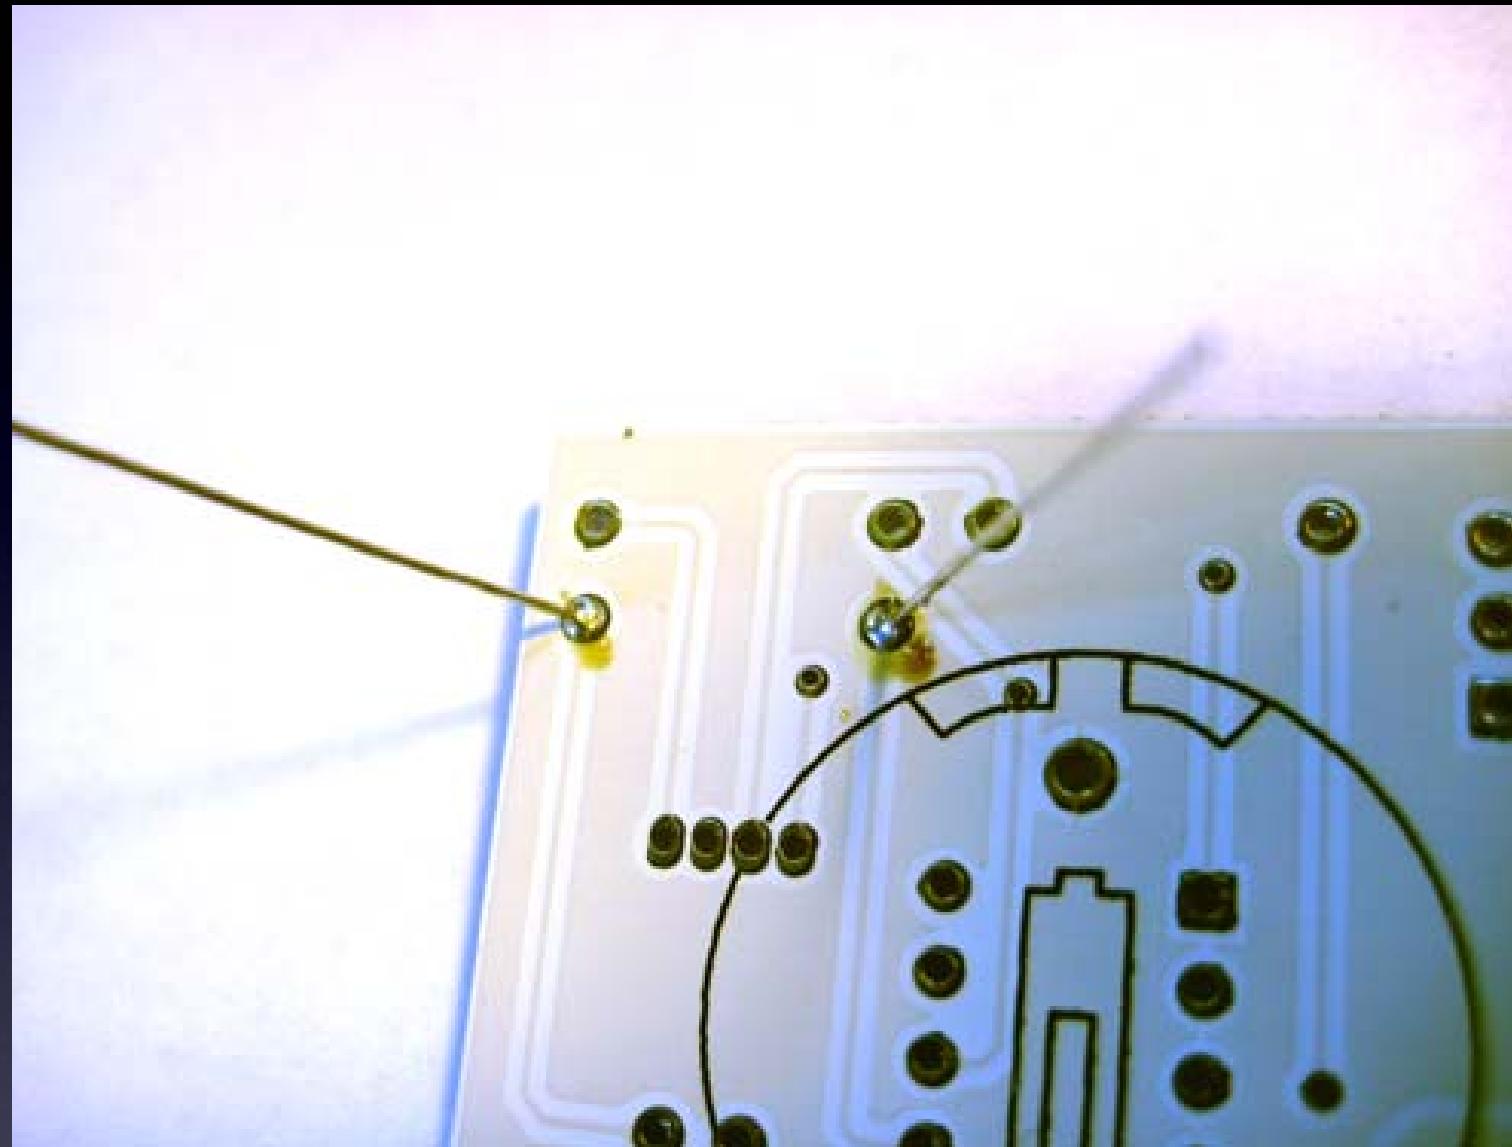

Lift Tip

If you are using solder **WITH** lead (Pb), you can now
Solder all of the leads of the part to the board

For this part, there are two leads
Here you can see two good solder connections

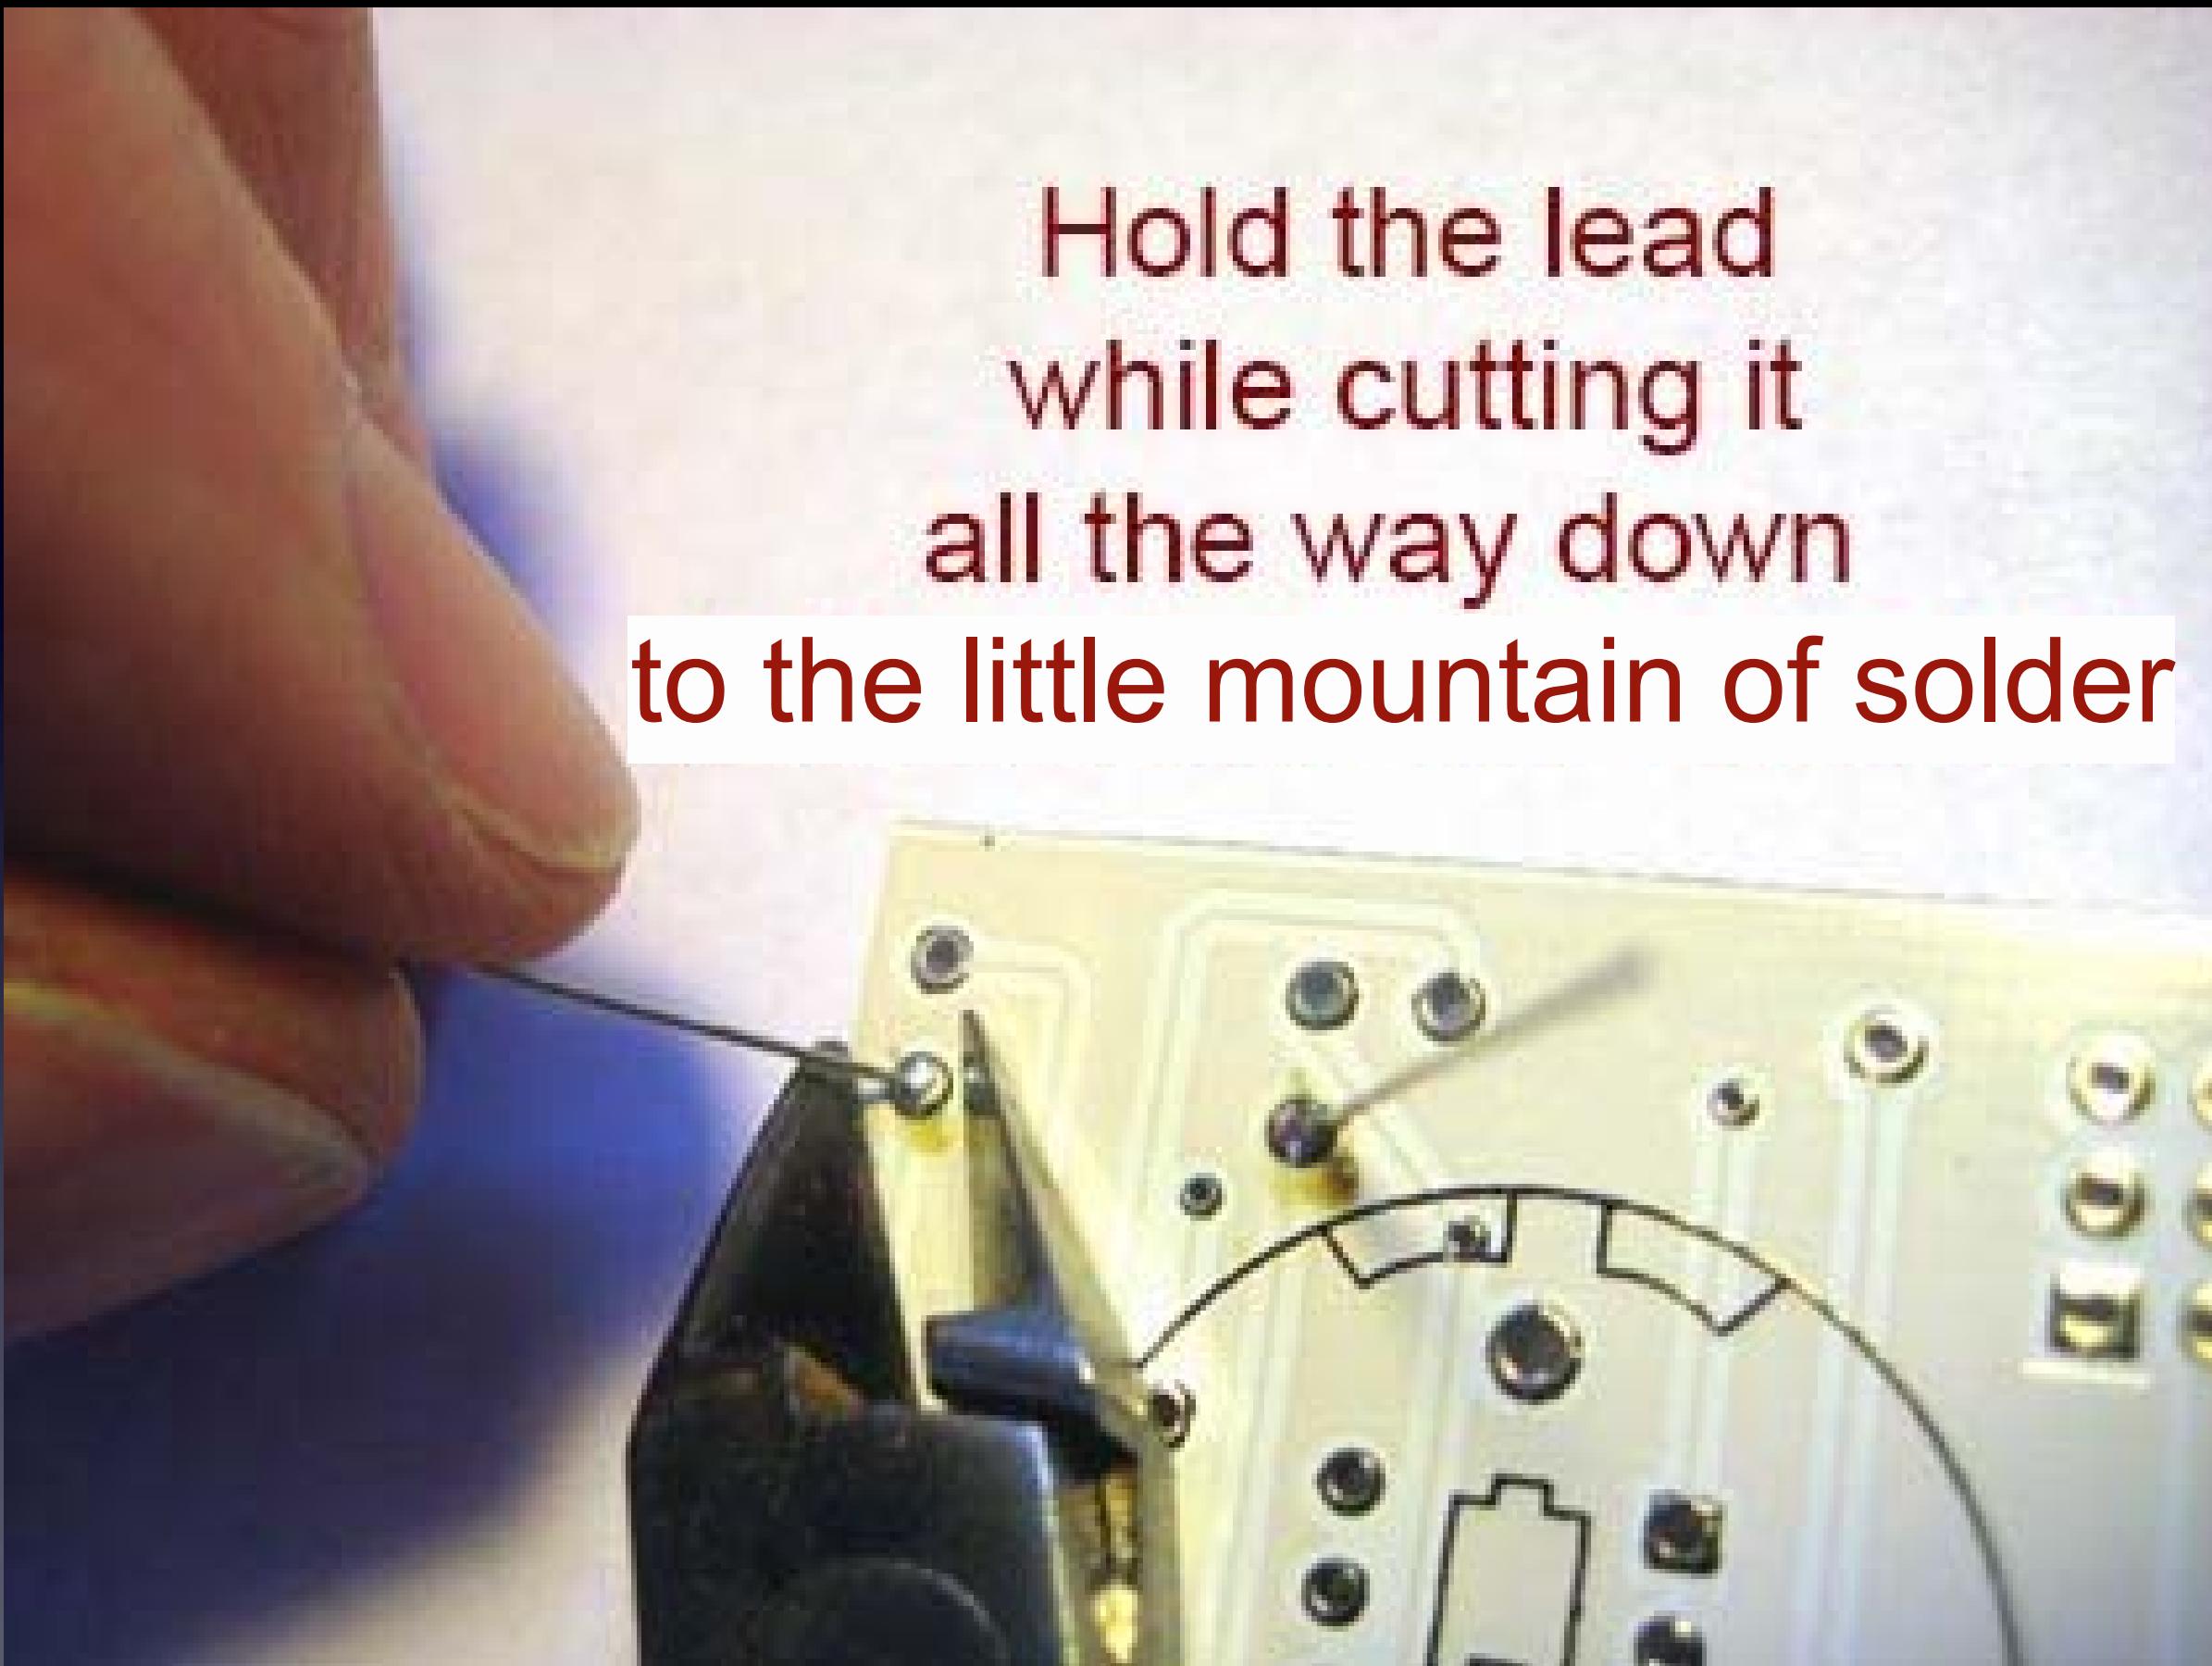

Two good solder connections

- Little mountains (not flat)
- Pads totally covered in solder
- Can't see the hole
- No connections to other pads

Now cut the leads short

Hold the lead
while cutting it
all the way down
to the little mountain of solder

Cutting with the tip of the wire cutter gives you more control

Safety Tip #3:

Hold or cover the lead !

(or it will fly into your eye!)

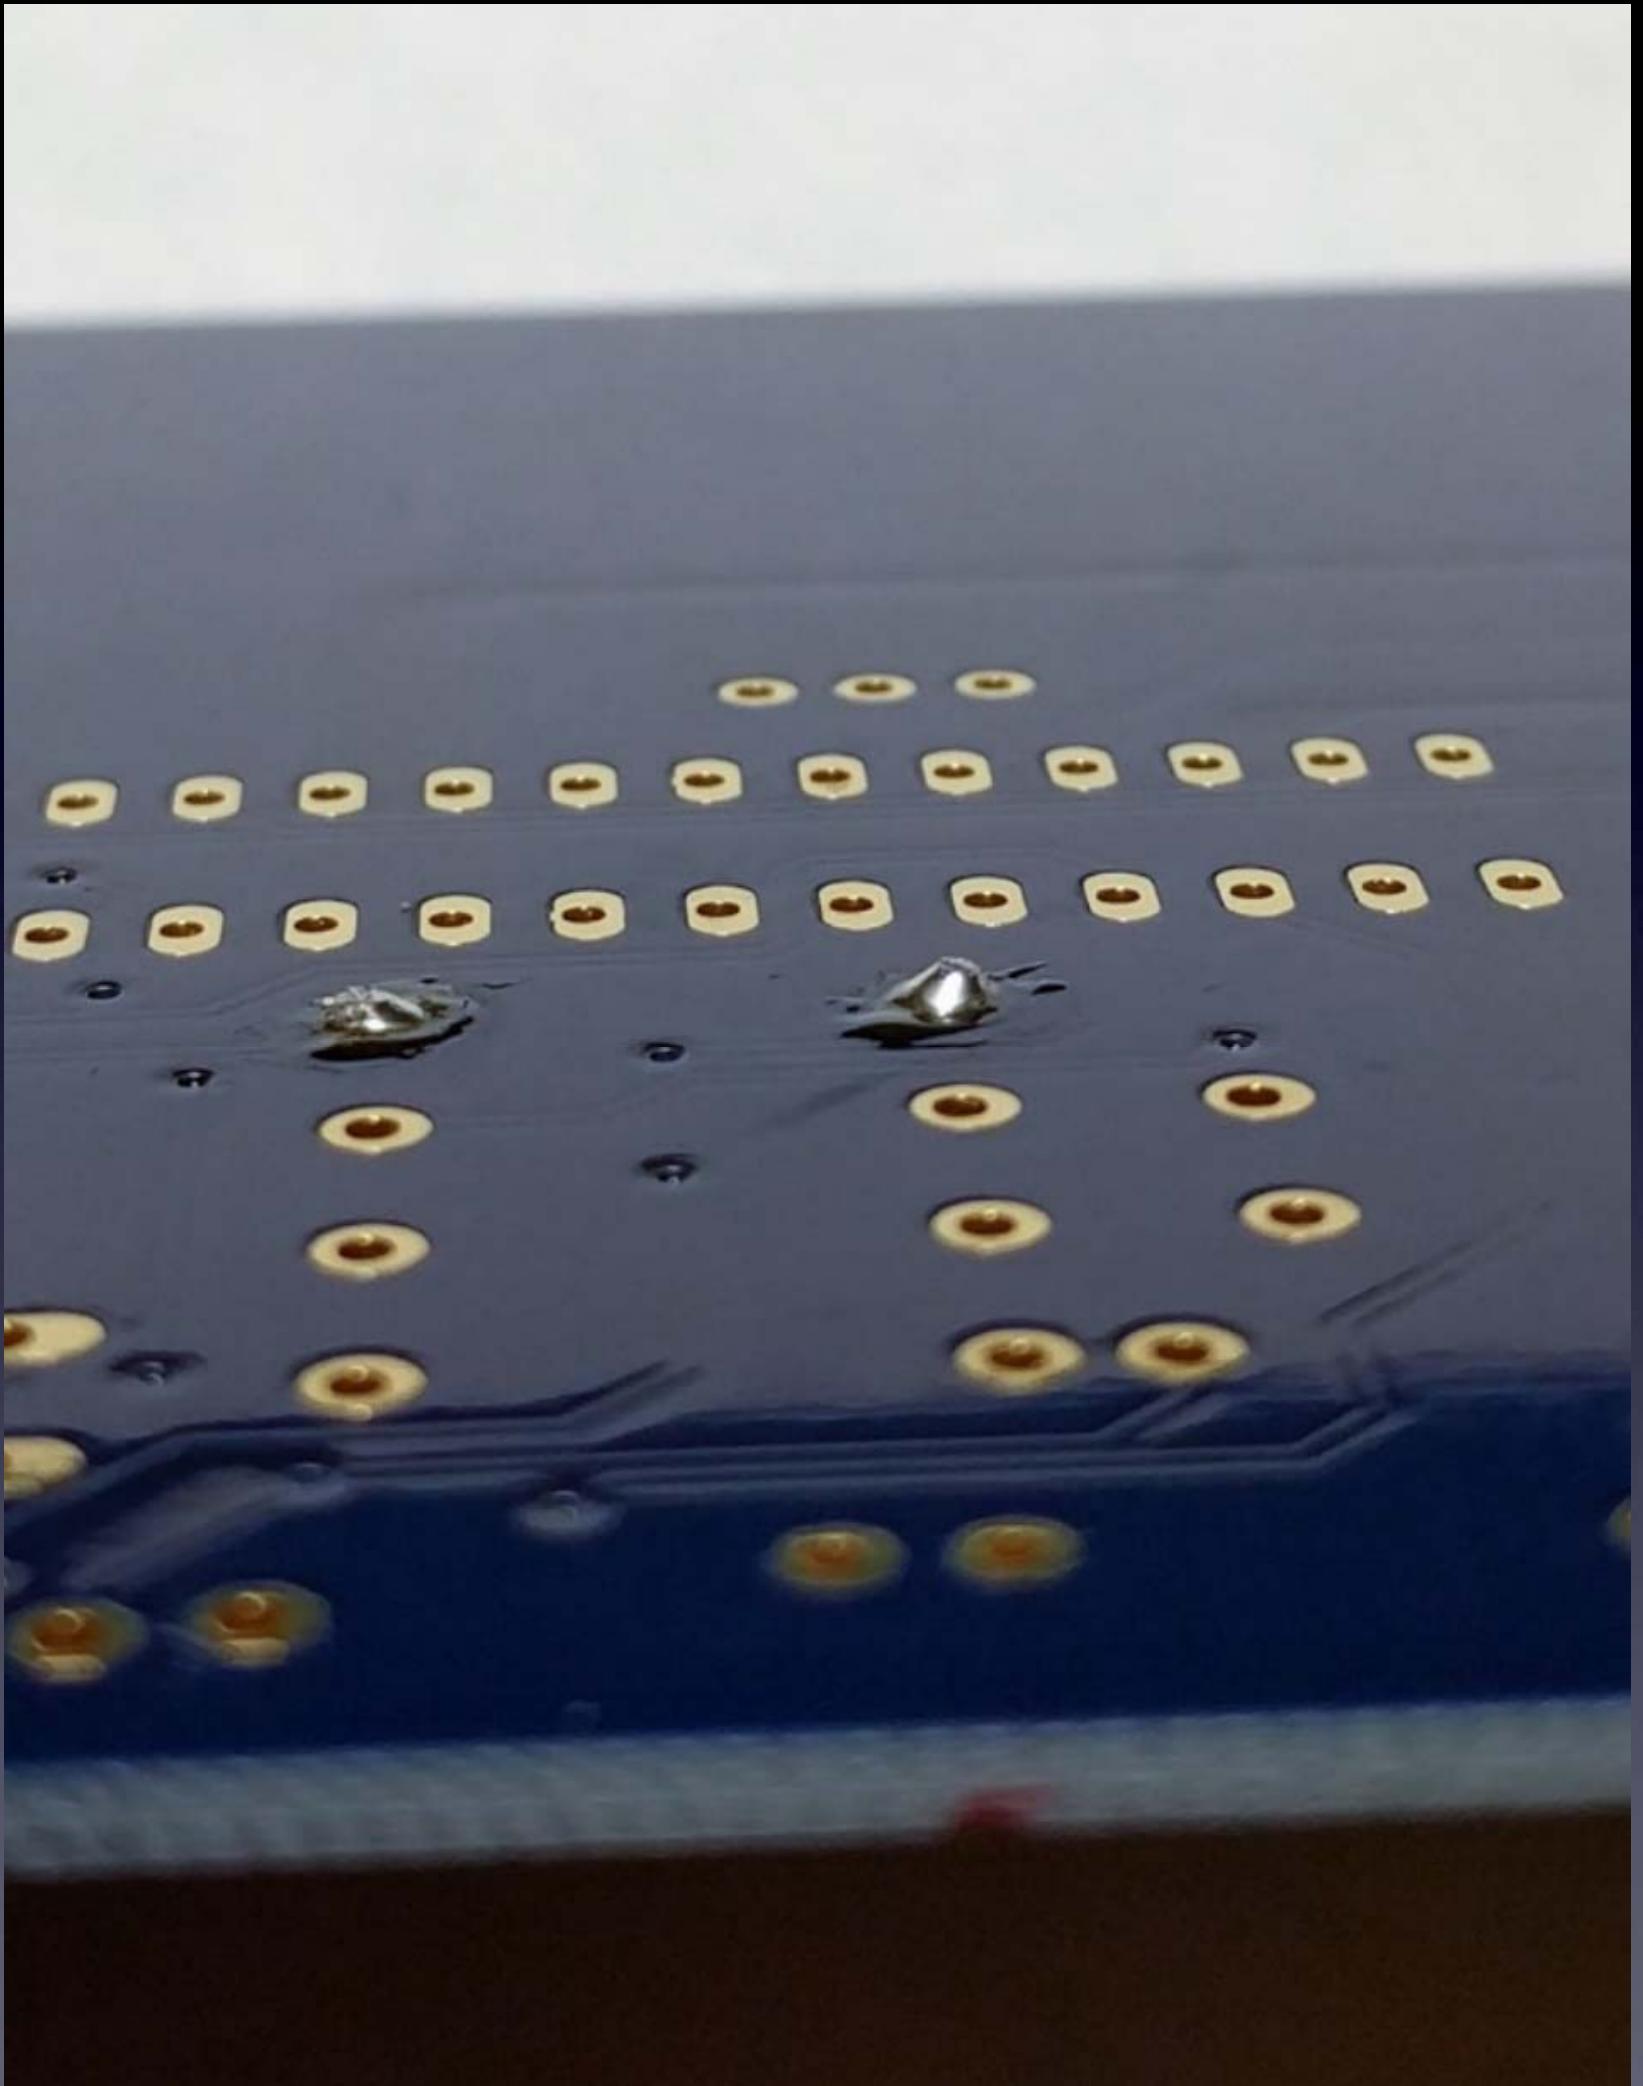

(They like doing that – so please hold or cover the lead when you cut.)

All done !

No wires sticking out

A closer look at good solder connections

Notice that:

- Each connection is a small mountain (not flat)
- You cannot see any pad (they're totally covered with solder)
- You cannot see the holes (they're totally covered with solder)
- No connections to other pads

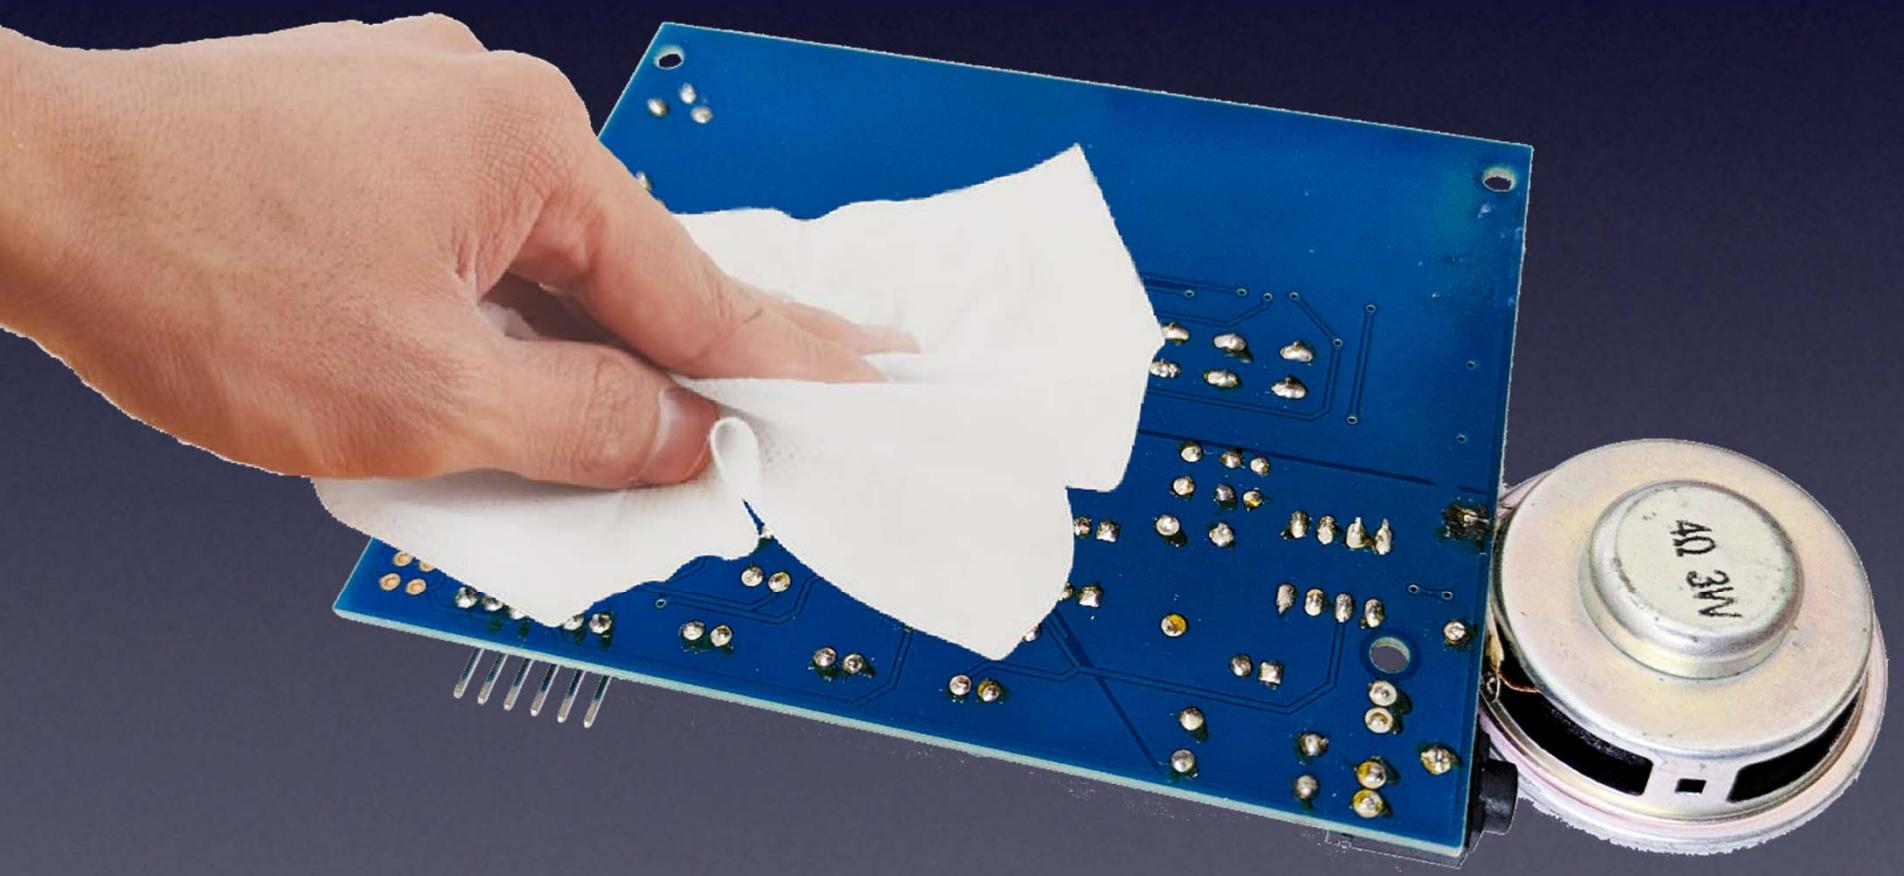

One part at a time

Till all the parts are soldered

If you used any ***flux paste*** for re-working problems

The bottom of the PCB will be sticky from the flux

You can clean it with a cloth
wet with Isopropyl Alcohol

Then put in the batteries,

Turn it on,

And it works!

(Or you start debugging.)

Soldering Is Easy!
