

Xoid

An XORing synth to make great digital sounds and noise!

==== Diagram of the Xoid Voice ====

==== Diagram of the Oscillator Section ====

How to use:

----- Presets -----

There are lots of way cool presets!

Load preset sounds by *double-tapping* the right button and then pressing any "white" key.

Play with these presets, and you can make lots of great digital sound and noise!

---- After loading a preset, you can mess with the sound! ----

Try *pressing* and *tap-pressing* the buttons and twiddling the pots, and see what kind of crazy sounds and noise you can get!

If you want to get really good at Xoid, it takes practice.

Xoid has a lot of combinations. What follows is an explanation:

Each LED can be in one of 3 states : OFF - ON - BLINKING

The LEDs indicate what parameters the pots control:

| Red LED | Blue LED | top POT | bot POT |
|---------|----------|----------------|------------------|
| OFF | OFF | combo XOR mix | combo freq ratio |
| ON | OFF | pair0 XOR mix | pair0 freq ratio |
| BLINK | OFF | pair1 XOR mix | pair1 freq ratio |
| OFF | ON | env ATTACK | env DECAY |
| ON | ON | env SUSTAIN | env RELEASE |
| BLINK | ON | vibrato FREQ | vibrato DEPTH |
| OFF | BLINK | autowah FREQ | autowah DEPTH |
| ON | BLINK | autowah ON/OFF | autowah CUTOFF |
| BLINK | BLINK | gain | portamento |

To bump the Red LED state: *press* left button

To bump the Blue LED state: *press* right button

When the Blue LED is off the Red LED also indicates what happens when you *tap-press* a button (a "tap-press" is a double tap with the 2nd tap being of longer duration):

| Red LED | Blue LED | tap-press: |
|---------|----------|--|
| ----- | ----- | left BUTTON right BUTTON |
| OFF | OFF | combo XOR on/off bump combo freq spectrum |
| ON | OFF | pair0 XOR on/off bump pair0 freq spectrum |
| BLINK | OFF | pair1 XOR on/off bump pair1 freq spectrum |

Note 1: Toggling an XOR function on and off dramatically effects the sound.

Note 2: Bumping the freq spectrum changes the frequency sweep for bottom pot.

For more info on XOR objects and their User Interface (U/I) see example sketches numbered in the 40s.

To raise keyboard by an octave, *tap* right button once.

To lower keyboard by an octave, *tap* left button once.

Types of button presses:

Tap: quickly tap a button

Press: long-press a button

Double-Tap: quickly double-tap a button

Tap-Press: think of this as a *Double-Tap* but with the second tap being of a longer duration.
